

Front-End Software Engineer – 20.11-FESE

Position: Front-End Software Engineer (position open in the Limassol office)

About your role:

You will be engaged in the company's software design and development activities, working with other software engineers and data scientists, as well as external partners for delivering various products/services/projects, with the opportunity to lead the development in certain projects.

What will keep you busy:

- Developing Mobile Applications and Frontend Interfaces for our Products and Services
- Contribution to other software engineering tasks, such as In-Depth Analysis, Specifications, Design (Requirements, Functional & Technical Specifications) and Development of Innovative Technological and Business Solutions
- Contribution to software development and integration planning
- Staying up-to-date with all the latest cutting-edge technologies
- Collaboration with external teams (clients, partners, collaborators)

What you need to have:

- B.Sc. in Computer Engineering, Software Engineering, Computer Science, Informatics or similar
- Proven work experience (at least 3 years) as a front-end developer in a professional setting
- Expertise on responsive front-end development frameworks (preferably VueJS, but also React or Angular will be appreciated) and technologies (JavaScript, HTML5, CSS3)
- Design, development, modification, and maintenance of user interfaces, tailoring user experience
- Native Greek and Excellent use of English in verbal and written form
- Good communication skills and team spirit
- Ability to operate comfortably in both the business and technical arenas

What's nice to have:

- Hands-on experience with TypeScript programming, Node.JS and its related MVC Frameworks, as well as on Python programming and Django Rest Framework
- Experience in hybrid mobile applications in React Native, Vue Native or in frameworks like Quasar and Onsen UI
- Familiarity with native mobile languages (Swift, Java) and build tools, like XCode, Gradle, etc
- Experience with RESTful API design, implementation and maintenance
- Familiarity with code management activities (git)
- Experience on SEO best practices
- Past collaborations within R&D engineering teams
- Contribution in open-source projects

What's in it for you:

- An attractive compensation package
- Flexible daily schedule
- Work in an international, dynamic and fun environment, at a growing company
- Opportunity to work with a highly talented and experienced team in state-of-the-art projects, in Cyprus / Greece and abroad
- Opportunities to work with prestigious international companies and R&D organizations and to attend meetings, international conferences and trainings across Europe
- Access to resources for professional and personal development

If this position is of interest to you and matches your background and career needs, we are looking forward to hearing from you!

Data Scientist – 20.11-DS

Position: Data Scientist (position open in the Limassol office)

About your role

Our products and systems are built on data analytics and machine learning algorithms that are defined, trained and applied to solve different problems for different industries. Playing around with data, writing code and experimenting with different algorithms to improve performance and accuracy while closely working with our developers to deliver an integrated platform/service is the basis for our activities. If you are a highly motivated and talented Data Scientist with the ability to understand complex problems, provide quick and quality solutions, stand to work under pressure and also take initiatives and the lead in certain tasks, then you are the best fit for our team!

What will keep you busy:

- Playing around with data of different volume, velocity and variety, coming up with the right questions, experimenting with different machine learning algorithms and explaining complex data analytics results through appropriate visualizations to business users
- Applied Research & Data Engineering (Design, Development, Maintenance) in the scope of RTD Projects
- Contribution to the tasks of In-Depth Data Analysis, Specifications, Design (Requirements, Functional & Technical Specifications) and development of Innovative Analytics Solutions
- Internal collaboration with our developers and software engineers to solve scalability and performance issues at an operating environment that constantly evolves and grows
- Collaboration with external teams (clients, partners) comprising Software Engineers as well as other Data Scientists and Domain Experts in the frame of Business and R&D activities of the company

What you need to have:

- B.Eng. in Computer Engineering, Software Engineering, Computer Science, Informatics or similar
- Proven work experience as a data scientist, incl. at least 3 years of production-grade data analytics
- Strong knowledge of modern programming and scripting languages (esp. Python)
- Hands-on experience with big data technologies (e.g. Spark, Hadoop) and Jupyter (and / or Zeppelin) notebooks
- Solid knowledge of data science tools (e.g. NLTK) and machine learning libraries (e.g. MLlib, Scikit, TensorFlow, etc.)
- Excellent written and verbal Greek and English communication skills to collaborate with other domain experts and to transfer knowledge
- Strong customer interface and excellent written and presentation skills
- Team-oriented mentality, with an open mindset to understand and consolidate other experts' perspectives
- Must be able to prioritize and work both, independently and as part of a team

What's nice to have:

- M.Sc./Ph.D. in Data Science, Data Mining, Machine Learning
- Basic back-end development skills (e.g. in Flask web framework)
- Knowledge and experience (modelling and architecture) of relational databases (e.g. PostgreSQL, Hive) and of non-relational databases (e.g. MongoDB)
- Good knowledge of query engines for big data (e.g. Elasticsearch, Presto) and visualization tools (e.g. Kibana, Grafana)
- Past collaborations within R&D engineering teams

What's in it for you:

- An attractive compensation package
- Private health insurance
- Flexible daily schedule
- Access to career development resources (conferences, training material, etc)
- Work in an international, dynamic and fun environment, at a growing company
- The opportunity to collaborate with prestigious international Organizations
- The opportunity to work with a highly talented and experienced team in innovative and breakthrough projects, in Cyprus, Greece and abroad

If this position is of interest to you and matches your background and career needs, we are looking forward to hearing from you!

Please email your CV at: jobs@suite5.eu (quoting the job code 20.11-DS-CY)

Back-End Software Engineer – 20.11-BESE

Position: Back-End Software Engineer (position open in the Limassol office)

About your role

You will be engaged in the company's software design and development activities, working with other software engineers and data scientists, as well as external partners for delivering various products/services/projects, with the opportunity to lead the development in certain projects.

What will keep you busy:

- Developing Code for our Products and Services

Business Analyst – 20.11-BA

Position: Business Analyst (position open in the Limassol office)

About your role

Supporting the implementation of technology solutions in a cost-effective way by determining the requirements of a project, writing up the IT specifications and communicating them clearly to stakeholders, facilitators and partners. This position is involved in activities planning and implementation, timely delivery of deliverables and milestones, as well as participating in project meetings, providing status to management, identification and management of barriers and risks and coordination with multi-disciplinary international teams from renowned academic and business entities for the timely and high-quality delivery of the project.

What will keep you busy:

- Capturing project requirements, work with business stakeholders, project managers and IT developers to facilitate the definition of the project scope, milestones and goals. Ensure all requirements are clear and well understood.
- Contributing to the implementation of company's projects with a clear focus on the utilization of the company's know how and technologies for the development and deployment of state-of-the-art solutions and applications for a variety of industry actors and stakeholders.
- Involvement in IT Technical Management for development monitoring and testing, as well as on-time delivery of state-of-the-art platforms and components.
- Support to the management of multiple concurrent projects.
- Contributing to completion of projects' activities in a timely manner, creation of project schedules, and identification of areas of risk and contingency plans.
- Collaboration with international teams and consortia to jointly plan project activities or resolve implementation issues.

What you need to have:

- B.Sc. in Computer Engineering, Software Engineering, Computer Science, Informatics or similar. A post-graduate degree (MSc or PhD) will be considered an asset
- Software engineering or Informatics background, with in-depth understanding of state-of-the-art ICT technologies and practices is required
- At least 2 years of track record as a Business Analyst. Experience in working on large-scale IT projects
- Native Greek and Excellent use of English in verbal and written form
- Strong communication skills to collaborate with other domain experts and to transfer knowledge
- Excellent written and presentation skills in support of technical documentation development and presentation
- Strong technical understanding with a positive, collaborative and team-oriented attitude, with an open mindset to understand and consolidate other experts' perspectives
- Proficient computer skills including MS Office and Project Management tools
- Must be able to prioritize and work both independently and as part of a team

What's nice to have:

- Experience in the implementation of Research & Innovation projects in the IT domain
- Knowledge of data analysis fundamentals
- Past collaborations within R&D engineering teams

What's in it for you:

- An attractive compensation package
- Flexible daily schedule
- Work in an international, dynamic and fun environment, at a growing company
- Opportunity to work with a highly talented and experienced team in state-of-the-art projects, in Cyprus / Greece and abroad
- Opportunities to work with prestigious international companies and R&D organizations and to attend meetings, international conferences and trainings across Europe

If this position is of interest to you and matches your background and career needs, we are looking forward to hearing from you!
