Open Letter from the Chairperson of the Department

Dear Students,

This prospectus contains a concise and comprehensive presentation of the Computer Science Department of the University of Cyprus. Furthermore, in this prospectus you will find information regarding your studies at the Department, including undergraduate and graduate curricula, course descriptions, rules of attendance, prerequisites for graduation, short biographies of the faculty, etc. Up to date information, announcements, news, etc. are published through the website of the department at http://www.cs.ucy.ac.cy and on our Twitter (@csdeptucy) or Facebook accounts; also through e-mail and on the announcement boards near the Secretariat of the Department. For personal advice on your studies, or for scientific/ professional orientation, or for any other matter that concerns you and may affect your studies, I strongly encourage you to keep regular contact with the academic advisor assigned to you during your enrolment to the Department.

The Computer Science discipline, albeit a relatively young scientific field, has already been recognized as a key scientific and technological discipline with impressive development and a strong influence on other sciences and the society at large. The growing significance and broad applicability of Computer Science has established the Department of Computer Science as one of the most dynamic and competitive departments in the University of Cyprus. The skills and high educational level that our students gain during their studies are acknowledged both by the local IT industry as well as abroad, as our graduates achieve commendable performance either as employees in the domestic industry or as postgraduate students at leading Universities in Europe and America. The annual student intake of the Department of Computer Science consists of 80 undergraduate students and approximately 35-40 graduate students. Currently, around 450 students are enrolled in the Department, of whom 82% are undergraduate students and the rest are postgraduate students of Masters level or doctoral students. Our Department is working systematically towards attracting outstanding students by organizing and supporting annual Computer Science seminars and competitions, such as the Information Day for High School Students and the Logipaignion game-creation contest. In fact, over the last five years (2017-2021) during the Pancyprian Examinations, the Department was ranked first among all programmes of study in pure and applied sciences, and engineering, regarding the number of candidates having it as their top preference. These are particularly strong pieces of evidence in favour of the overall standing of the Department.

Both the undergraduate and postgraduate curricula have been designed to meet the current challenges and advancements in Computer Science, and cover theoretical foundations, technical knowledge, and
experimental methodologies of Computer Science with a strong problem-solving focus. The
Department follows on a continuous basis and contributes itself towards the scientific developments
and advances of Computer Science, revising and modernizing at regular intervals its curricula,
enriching its catalogue of advanced electives, and enhancing the interdisciplinary content of its
education provision. In addition, the Department offers a minor in Computer Science for students of
other departments of the University of Cyprus. More details are included in this prospectus.

At the postgraduate level, our department offers a Ph.D. program in Computer Science and a number
of Masters programmes, including both programmes with a research orientation and programmes with
a professional orientation. In addition, from the academic year 2017/18, the Department offers in
English a joint Masters programme in “Cognitive Systems”, by distance leaning, in collaboration with
the Open University of Cyprus and the Department of Psychology of the University of Cyprus. This
academic year we see the commencement of the new interdisciplinary and inter-departmental Masters
programme in Data Science, taught in English, in collaboration with the Departments of Mathematics
and Statistics, and Public and Business Administration. Yet another specialized Masters programme
in Artificial Intelligence, that will also be taught in English, is currently under development with
financial support from the European Commission. Hopefully this programme will commence in the
academic year 2022/23.

All programmes of the Department comply with the regulations of the European Credit Transfer and
 Accumulation System (ECTS). Every student, on the completion of his/her studies receives a Diploma
 Supplement together with his/her University degree. During your studies, you are strongly encouraged
to participate in the European programme ERASMUS+ that supports student exchanges, thus allowing
you to spend a semester of your studies at another academic institute within the European Higher
Education Area.

Our Department is in constant dialogue with industry, relevant government departments and centers of
excellence abroad to contribute decisively in promoting Cyprus as a center of services, expertise and
innovation in Computer, Information and Communication technologies. Also, the Department is
working vigorously for the international promotion of our students’ skills through attendance and/or
awards in international competitions in programming, innovation, entrepreneurship, etc. Overall, our
goal is to bestow our students with knowledge, skills and competencies that would enable them to push
the frontiers of the Cypriot IT industry towards new highly competitive areas in comparison with the
 corresponding industries of other countries in our geographical region as well as in Europe.

In these efforts the strong presence of the Department in research is vital. Since its foundation, over
twenty-seven years ago, the Department has developed highly important activities and contributes in
the promotion of science and knowledge worldwide. Particularly important is the participation of the
Department in research programs of the European Union (EU), as well as domestic programs of the
Research and Innovation Foundation (RIF) of Cyprus. Specifically, since 2007, faculty members of
the Department have attracted more than 160 research projects from the EU and the RIF with a total
budget exceeding €27 mil. Most of this funding has been used to subsidize hundreds of young scientists
- researchers, doctoral students, postdoctoral associates and graduate students from Cyprus and abroad,
to develop modern research and teaching infrastructure and the development of innovative software
systems, hardware and applications. Research results are presented by faculty members and
researchers of the Department each year in top Computer Science journals and conferences and are
utilized by the international scientific community and industry. In addition, a particularly valuable
contribution of the Department is its support towards governmental actions for the uptake of
Information and Communication Technologies by the public sector, the promotion of the Internet and
the Web in Cypriot businesses and society, and the technological modernization of Secondary Education and Health Services.

During your studies, I urge you to actively engage in the Departmental teaching and research activities to get the utmost regarding knowledge and experience that the Department can offer to you. Also, I invite you to take advantage of courses in other disciplines offered by the various Departments of the University, in order to enhance your knowledge and gain a more comprehensive and universal education. This opportunity is also available through the European Student Exchange Programme ERASMUS+ mentioned above.

Dear students,

The unprecedented situation we are experiencing since last year due to the new Covid-19 virus, in addition to the important lessons it has given us, demonstrating in practice that with collectivism such crises can be overcome and even turned into opportunities, highlighted the importance of technology and of information tools. Without them, it would not be possible for us to continue to operate and complete the last two academic years smoothly.

On behalf of all the members of the Department, I once again welcome you and wish everyone a fruitful, creative and productive year!

With best wishes,

Professor Elpida Keravnou-Papailiou,
Chairperson of the Department of Computer Science

Introduction

The Computer Science field at its early days of birth had a specific scope, mainly concerned with the automation of mathematical calculations; quickly though, it developed into an exciting amalgam of science, technology, and theory. Today, Computer Science addresses a wide range of topics such as extending the range of problems which can be effectively solved using computers; creation, maintenance, and optimization of software and hardware for high performance computer systems; the way in which humans reason, discuss, and plans their activities; modeling the operation of the human brain; and the role of language and logic in problem-solving. Consequently, Computer Science has direct links with all of the Natural Sciences, and with many other branches of human knowledge such as Philosophy, Psychology, Cognitive Sciences, Linguistics, and Management. This multidisciplinary nature of our relatively young field inherits unlimited opportunities for discovering new applications and exploring new research directions.

Nowadays, Computer Science influences essentially every field of human endeavor, with important applications in industry, commerce, economics, education, and medicine. The fast technological growth and the wide spread of computers in our lives has significantly improved the quality of our lives by offering a huge variety of new services such as performing tasks which are too dangerous or too complicated for humans and contributing to the dissemination of knowledge and expertise via knowledge-based systems. Computer networks and distributed processing techniques are widely used and have become essential in today’s working environment. The initial misapprehension that people would be replaced by computers has now been dispelled by the realization that computers merely amplify people’s natural abilities and provide assistance in performing their work more effectively.
The ECTS System

As of the academic year 2005-2006, the University of Cyprus has adopted the European Community Course Credit Transfer and Accumulation System, or ECTS for short.

What is ECTS?

ECTS, or European Credit Transfer and Accumulation Credits, was developed by the Commission of the European Communities in order to provide common procedures to guarantee academic recognition of studies uniformly throughout Europe. It provides a way of measuring and comparing learning achievements and transferring them from one European institution to another.

ECTS provides transparency through the following means:

- **ECTS Credits** which are a numerical value allocated to course units to describe the student workload required to complete them.
- The **Information Package**, which supplies written information to students and staff on institutions, departments/faculties, the organizations and structure of studies and course units.
- The **Diploma Supplement**, which shows students’ learning achievements in a way which is comprehensive, commonly understood and easily transferable from one institution to another.

The ECTS Credits

ECTS credits are allocated units to describe the student workload required to complete them. They reflect the quantity of work each course requires in relation to the total quantity of work required to complete a full year of academic study at the institution that is, lectures, practical work, seminars, private work – in library or at home – and examinations or other assessment activities. ECTS credits express a relative value. In ECTS, 60 credits represent the workload of a year of study and 30 credits are given for a semester.

Credits are awarded only, when the course has been completed and all required examinations have been successfully taken.

The expected time for the completion of the Undergraduate Program of Studies is eight semesters. This time can be extended up to twelve semesters. A student is required to complete 240 ECTS units in order to acquire a Bachelor degree in Computer Science at the Undergraduate Programme of Studies. Furthermore, for a Master Degree, successful completion of at least 90 ECTS is required.
General Information

Class Attendance and Teaching
Teaching is carried out in the internationally established way through lectures, recitation (tutorials), laboratories, etc. Students are expected to consistently participate in all activities of classes they are attending (e.g., lectures, tutorials, laboratories, etc.). The Department reserves the right to disallow students who systematically skip the activities of attended classes from taking the corresponding final examinations.

In most classes, homework is assigned regularly to help students master the course material and develop practical skills. Homework is carried out either individually or collaboratively small student groups.

Evaluation is usually based on assigned homework, written and oral examinations, etc. Special efforts are made to use continuous evaluation whenever possible.

Students are informed about the specific procedure of teaching and evaluation for each class from its class Instructor. The relevant information is included in the “General Information” sheet for the class, which is handed out to the students during the first week of classes each semester. The Instructor is available to the students during predetermined weekly office hours.

The general rules of studies of the University, the rules that govern the rights and responsibilities of the students, as well as the procedures that need to be followed, are included in separate leaflets. These are made available to the students by the Administrative Service of Academic Affairs and Student Welfare. Student must know all the rules that concern them.

Academic Advisor
A member of the Department’s academic staff is assigned to each student as an Academic Advisor. The Academic Advisor provides assistance or advice on academic matters (e.g., difficulties in following a class, appropriate combinations of restricted choice classes, etc.), but also advice on other matters such as personal problems.

The role of the Academic Advisor can not be effective without the cooperation of the student. So, both undergraduate and graduate students, especially the freshmen, are strongly encouraged to have frequently meetings with their academic advisors, in order to achieve better preparation and organization of their program of study as well as to resolve related issues and problems. It should be noted that the students are held responsible for their final decisions regarding their academic choices. However, they should keep informed their Academic Advisor of their decisions.

Student Representation
Six elected representatives of the students are currently participating in the Departmental Board as members. Furthermore, during each Fall Semester, the Department requests that students elect two representatives per year in order to facilitate intercommunication between the year’s students and the Department.
**Secretariat**

Daily activities can be carried out through the Departmental Secretariat. Students are informed by their Academic Advisors on services or other facilities the Secretariat can provide as well as about the specific timings the Secretariat is available to the Students. In particular, the Secretariat can provide any kind of general information regarding the Department or the University.

**Course Schedule**

The Class Schedule is not included in this Prospectus, but it is handed out to the students at the beginning of each Semester. Although every possible effort is made to satisfy the scheduling of any reasonable combination of classes, there is, however, a possibility that some students will face difficulties in combining certain of their (restricted or unrestricted) choices due to, e.g., concurrent class meetings. In such cases, students are urged to immediately notify their Academic Advisors.

**Library Use**

The University’s Library is equipped with a large number of books and scientific journals in Computer Science. These include books that will assist the students in mastering the taught course materials, and, in particular, the books recommended or suggested by Instructors. Therefore, the students should have their student ID in order to have access to the library facilities. Regulations for using the Library are separately handed out to the students at the beginning of each academic year.

**Electronic Notices / Departmental Website**

The Department uses electronic mail for the fast dissemination of information among the students and its Faculty/Staff members. Also, all necessary information (courses, talks, announcements, etc) can be found at the Departmental website ([https://www.cs.ucy.ac.cy](https://www.cs.ucy.ac.cy)). There is also a special section for students called Student’s Corner where students can obtain up-to-date important academic information. Furthermore, the department is using social media (facebook and twitter pages) for the better communication among its members.

**Electronic Mail**

The use of Electronic Mail for communication between academic staff and students, and also between students themselves, is considered a must, and students are strongly encouraged to learn as soon as possible how to effectively use Electronic Mail. However, it is emphasized that the use of Electronic Mail is not a right of the students, but rather a service provided by the Department. In cases where inappropriate use of Electronic Mail is noticed, the Department reserves the right to disallow its use.

**Laboratory Equipment**

A significant part of our Curricula is of practical content. The Department has five laboratories, fully equipped for teaching and research in Computer Science.

- The **Postgraduate Laboratory (201)** consists of 30 last generation computers with Microsoft Windows 7 Enterprise operating system and special software for the support of specialized courses at the graduate level and, more specifically, in the directions of Internet Technologies and Intelligent Systems.

- The **General Teaching Unix Laboratories (B103) and (103)** consists of 33 workstations of the latest generation equipped with the Linux (CentOS 6.0) operating system and Free NX server, and they provide software for the development of various applications.

- The **General Undergraduate Laboratory 1 (B121)** consists of 30 workstations of the latest generation, equipped with the operating system Windows 7, and provided with
software for the development of various applications.

- The **General Undergraduate Laboratory 2 (B123)** consists of 31 workstations each, of the latest generation, equipped with the operating system Windows 7, and it provides software for the development of various applications.

- The **Digital Systems Design and Microprocessor Laboratory (101)** consists of 27 last generation computers with Microsoft Windows 7 Enterprise operating system. Furthermore, there are digital logic and microprocessor boards, oscilloscopes, digital multimeters, logic probes, signal generators and integrated circuit testers. This equipment is used for practical training in hardware. In addition, this Laboratory includes peripheral devices for training in the design of microprocessor systems, and in the development of prototypes.

- The **Walk-in Laboratory (B101)**, in which both personnel and students may bring their portable computers and connect to the Internet and the departmental computer systems.

- The **Tele-education room (148)** is a lecture room of 20 seats and it can be used for: (i) data distribution to remote users, (ii) live and on demand streaming of lectures and presentations, (iii) lecture capturing on DVDs.

More information on the equipment is provided on the website of the Information Systems Technical Support ([http://its.cs.ucy.ac.cy/](http://its.cs.ucy.ac.cy/)).

**Laboratory Equipment Use Regulations**

Students are kindly requested to respect fundamental principles of professional behavior regarding health and safety in common rooms and responsible use of laboratory equipment. In particular, the following are indicative examples of disallowed tasks:

- Access to computer systems using somebody else’s account
- Inappropriate use of Electronic Mail
- Use of computer systems for purposes other than the “normal” (e.g., development of commercial products, disturbance of users, etc.)
- Use of software products other than those provided by the Computer Center, without the consent of the Computer Center or the Department, respectively.
- Attempt to access confidential information
- Copying software products that belong to others, in violation of international laws of liability.

Specific information regarding Regulations and Time Table for using the Computer Laboratories are handed out to the students at the beginning of each academic year.
Awards

For each academic year, the Department grants, on the basis of academic merit, awards to its undergraduate students. These awards have been founded by external sponsors. In the academic year 2017/2018, the following were awarded:

[1] «Award Logicom (Public)» from Logicom Public Ltd to the graduating student who has attained the highest overall academic performance (Monetary award of 1000€)

[2] «Award JCC» in the memory of the deceased General Director of JCC Taki Fekkou to the graduating student who has attained the second highest overall academic performance (Monetary award of 500€)

[3] «Award HF Markets» from HF Markets (Europe) Ltd to the graduating student who has attained the second highest overall academic performance. (Monetary award of 500€)

[4] «Award SEPAIK» from SEPAIK Union to the graduating student who has attained the highest overall academic performance. (Monetary award of 350€)

Also, the Department itself grants the following awards to its undergraduate students:

[1] Special Award to the undergraduate student who is completing the Minor Program of Studies in Computer Science and has attained the highest overall academic performance in the courses of the minor program. (Monetary award of 340€)

[2] Special Award for the graduating student who has demonstrated exceptional social contribution. (Monetary award of 340€)

[3] Award for the graduate student who has demonstrated outstanding and praise-deserving effort in Memory Polyvios Polyviou. (Monetary award of 500€)

[4] Excellence Award in the memory of the deceased Professor George Samaras to the graduating student who has attained in combination the highest academic performance in the compulsory course Database Systems and the highest overall academic performance. (Monetary award of 500€)

[5] Department Award of excellence to the graduating students of the Department of Computer Science who have achieved an excellent performance. (Over 8.5/10) (Monetary award of 200€/each)

Also, the Department grants, every year, the following awards to its postgraduate students:

[1] 1st Award for the graduating student who has attained the highest overall academic performance. (Monetary award of 680€)

[2] 2nd Award for the graduating student who has attained the second highest overall academic performance. (Monetary award of 340€)

[3] Award of Mariou Tsakalaki, donated by the family of the deceased Marios Tsakalakis (who served as System Architect in the former Laiki Banj), for the graduating student who has attained the highest overall academic performance. (Monetary award of 500€)

The Department awards a certificate of excellence to the student with the best overall academic performance in her year for the 1st, 2nd and 3rd academic year, as well as certificates to all students that have been distinguished in national and international competitions.

** Awards may differ each academic year following the guidelines of the sponsors.
Administrative Duties of Academic Staff

Committees/Groups

[1] Postgraduate Program Committee: V. Vasileiou (coordinator), Chr. Christodoulou, Y. Dimopoulos,

[2] Undergraduate Program Committee: A. Philippou (coordinator), C. Pattichis, G. Pallis

[3] Undergraduate Transfers Committee and Correspondence Students: G. Papadopoulos (coordinator), Y. Chrysanthou, Y. Dimopoulos

[5] Communication and Promotion: G. Kapitsaki (publication coordinator), G. Pallis (website coordinator)

[9] Liaison with the Industry and Student Internships: E. Athanasopoulos (coordinator), M. Dikaiakos, Chr. Georgiou

[10] Liaison with ERCIM: A. Aristidou (contact point), G. Kapitsaki (editorial board)

[12] Summer School: V. Vasileiou, Y. Chrysanthou

[14] Computer Systems and Infrastructures Committee: D. Zeinalipour (coordinator), E. Athanasopoulos, G. Pallis,

Representatives/Coordinators:

[1] Library: A. Philippou

[6] International Relations: M. Dikaiakos

[7] YUFE (Young Universities for the Future of Europe): G. Kapitsaki
Undergraduate Program of Studies

According to the ECTS System, at least 240 ECTS units are required for acquiring a Batchelor’s degree in Computer Science.

Objectives and Prospects

The Undergraduate Program of Studies leads to a Batchelor’s degree in Computer Science. The Department aspires to prepare graduates able to pursue careers in positions of responsibility in either academia or industry, where they will effectively drive the development and application of new methods and ideas. The Department attaches particular importance to maintaining links and continuous dialogue with local industry, and we expect our graduates to play a significant role in this respect.

Any curriculum, no matter what its subject, must offer the student education in the widest sense of the term, and cultivate the desire for continuous learning, which, in turn, leads to maturity and develops the facilities for independent and critical thinking. This general objective coexists with and enriches the more specific objectives of individual programs.

We hope that our graduates will acquire a deep understanding of Computer Science, both as a science, and in terms of its more general applications and effects on society. The Curriculum covers the essential practical techniques, together with the deeper principles which underpin them. Our graduates will be well qualified to obtain immediate employment in Cyprus or abroad as IT professionals, or as teachers of Computer Science in secondary education; alternatively, they may choose to continue their studies to postgraduate level, and further pursue a career in either academia or research. Whichever career path they choose, their studies will have given them the necessary grounding to keep abreast of the incredibly rapid scientific and technological developments in Computer Science.

The expected time for the completion of the Undergraduate Program of Studies is eight semesters. This time can be extended up to twelve semesters.

Course Areas

The Department’s undergraduate course material is conceptually divided into the following areas or components: Theory, Computer Systems, Problem Solving and Applications.

The Theory component is concerned with the foundations of Computer Science: theory and models of computation, and the design and analysis of algorithms. Generally this component aims at cultivating a formal approach to thinking, and organizing and processing information. Logic, and its role as the calculus of Computer Science, is an important topic. Essential concepts of Discrete Mathematics are taught as an integral part of related courses offered by the Department. Students are also required to follow a number of courses offered by the Department of Mathematics and Statistics in order to develop their abilities for abstraction and formal thinking, and to acquire other useful mathematical skills.

The Computer Systems component is concerned with hardware and software systems and elaborates on the concepts of parallel and embedded systems. It includes basic principles of computer architecture and organization, operating systems, programming language design and implementation, microprocessor systems, data communications, networks, distributed systems, and parallel and novel architectures.

The Problem Solving component aims at developing algorithmic thinking, with emphasis on principles of programming and program design. Through this component, students will acquire competence in a number of programming languages using a variety of programming paradigms (imperative, object-oriented, logic-based). Concurrent, parallel, distributed and
heuristic techniques of problem solving are addressed in restricted choices. In this component, students learn how to design, implement and evaluate solutions to significant, albeit relatively small, problems. The wider integration of these techniques in building methodological frameworks to solve real-world problems is studied in courses on systems analysis and design, and software engineering as indicated in the Applications component.

The Applications component aims at bringing together the knowledge and skills acquired in the other three components for the development of useful applications to solve “real-world problems”. Important technologies such as databases, knowledge bases, graphics and user interface managers are introduced as examples of applications in themselves and as vital tools for the construction of higher level applications. Modern Software Engineering methodologies that address every stage in the planning, design, development, and maintenance of high-quality applications are studied, and subsequently put into practice in the context of a group project undertaken in the framework of the course Software Engineering Professional Practice. Finally, important social and ethical issues concerned with the spread of computers are raised and discussed.

The Undergraduate Program of Studies consists of Compulsory Courses covering core material, Restricted Choices in Computer Science or related subjects, and Unrestricted Choices offered by other Departments. Some courses have other courses as prerequisites. The course dependencies between the compulsory courses are depicted in Table 1.

Since the academic year 2016/2017, the Department of Computer Science is offering the following specialisations (existing students follow the previously offered programme of study):

- Computer Networks
- Fundamentals of Computer Science
- Big Data and Internet Computing
- Real World Computation
- Artificial Intelligence
- Software Engineering
- Digital and Embedded Systems

Each specialization is linked to a number of courses. The aim of the specialisations is to give students the possibility and the motivation to focus on a specific area of Computer Science, via the Elective Courses and an individual diploma project, called undergraduate thesis project. If a student selects at least 3 Elective Courses from the courses indicated for each specialization and undertakes an undergraduate thesis project from the same specialization under the supervision of a faculty member then the respective specialization will be indicated in her transcripts. Applications for the recognition of the specialization need to be submitted by the student, in the dedicated form, to the Undergraduate Program Committee after the period of changes in enrollments in the last semester of studies. The Department is not obliged to offer all restricted choice courses, in order to cover all specializations, nor will it change the restrictions regarding the class size and the process for selecting the undergraduate thesis project.

Almost all courses offered by the Department in the first four semesters are compulsory and common to all students. Students are asked to choose a direction at the beginning of the fourth semester of their studies. In the fifth and sixth semesters, students are required to take the compulsory courses of their chosen direction, as well as elective courses from other departments. The last two semesters include restricted elective courses (three courses from the chosen direction and any two courses in Computer Science 300 or 400 level) within the direction and elective courses; also, each student must undertake an individual Diploma Project, under the supervision of a member of the Department’s academic staff. The topic of the Undergraduate Thesis Project must relate to the student’s chosen direction of study..
**Curriculum**

Each course code has the form XYZ, where X represents the type of the course and Y the area it belongs to. Courses offered for students of other Departments have, by default, type 0. Compulsory courses are of 1\textsuperscript{st}, 2\textsuperscript{nd} or 3\textsuperscript{rd} type, restricted elective courses are of 4\textsuperscript{th} type, while the Diploma Project is of 4\textsuperscript{th} type. Course areas have code 1 (Theory), 2 (Computer Systems), 3 (Troubleshooting) and 4 (Applications). General content courses have area code 0.

Below we cite the indicative programs offered by the Department since the academic year 2019/2020, as well as the courses linked with each specialization.

* Students of specialisation Big Data and Internet Computing can select the course MAS 458 Statistical Data Analysis from the Department of Mathematics and Statistics. This means that the total number of ECTS will be 0.5 less, since the course has 7 ECTS. The students are encouraged to attend a selective course to cover the 0.5 ECT in their program.
Regarding the distribution of elective courses in the 4th year of their studies in both semesters, the student has the possibility to choose the following alternative program of study, is he/she wishes to:

<table>
<thead>
<tr>
<th>7th Semester: Diploma Project I</th>
<th>3 Restricted Elective Courses</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>BPA 369 Principles of Entrepreneurship and Innovation</td>
</tr>
<tr>
<td>8th Semester: Diploma Project II</td>
<td>1 Restricted Elective Course</td>
</tr>
<tr>
<td></td>
<td>2 Elective Courses</td>
</tr>
</tbody>
</table>

**Restricted Elective Courses**

In consultation with her/his academic advisor, each student selects Restricted Elective Courses according to her/his interests and professional goals. A student may choose to expand her/his knowledge in one specific area, or may select a combination of courses in more than one area. Thus, the Restricted Elective Courses may be selected so that they satisfy, to a certain significant degree, the student's goals and aptitudes.

Graduate courses offered by the Department of Computer Science may also be selected by the student as Restricted Elective Courses after appropriate approval from the Committee of the Undergraduate Program.

**Elective Courses**

Each student, in consultation with her/his Academic Advisor, selects elective courses. The selection is made according to the interests and the goals of the student. The Unrestricted Choices must be courses offered by other Departments. According to the Rules for Undergraduate Studies of the University, the elective courses must include courses from at least three different Schools of the University. Only one foreign language course of first level is recognized as elective course. If however, a student has succeeded also in the second level course of the same foreign language, both courses are eligible as elective courses.

**Foreign Language Courses**

Each student must successfully attend two courses in a foreign language. The Department has allocated 10 ECTS credits for these courses and identifies English as a foreign language.

**Diploma Project**

During the last two semesters of her/his studies, each student undertakes an individual Diploma Project in accordance with regulations approved by the Departmental Board (Meeting of 19/7/95). These regulations have been revised by the Departmental Board (Meeting of 06/12/10) and can be found in Appendix A. The Diploma Projects are collected within the open access Digital Library [http://godigital.cs.ucy.ac.cy](http://godigital.cs.ucy.ac.cy).

**Minor Program in Computer Science**

The Minor Program in Computer Science is open to all students of the University outside the Department of Computer Science. It consists of eight courses with a total workload of
at least 60 credits. Given that schooling starts in Spring, the program can be completed in four consecutive semesters for monitoring two courses per semester. The organization of courses is as follows:

1st Semester (considered as a Fall Semester)
CS131 Programming Principles
CS111 Discrete Structures in Computer Science and Computation

2nd Semester
CS133 Object-Oriented Programming
CS121 Digital Systems

3rd Semester
CS231 Data Structures and Algorithms
One course from core courses or from the restrictive elective courses of the Computer Science curriculum.

4th Semester
Two courses from core courses or from the restrictive elective courses of the Computer Science curriculum.

The number of admitted students in the Minor Program in Computer Science is 10. Necessary criterion for admission is that the weighted average for all previous semesters must be at least 6.5.

Minor Programme in Biomedical Engineering

The Minor Programme in Biomechanics requires the successful completion of ten courses with at least 60 ECTS as a total. It has to be completed between the 8th and 12th semesters of study. The students can choose among the following courses:

Winter Semester (course names appear in Greek)

- BIO 102 Αρχές της Βιολογίας Ι
- BIO230 Εισαγωγή στην Υπολογιστική Βιολογία
- BIO 442 Πρακτική Άσκηση στη Βιολογία
- BIO 495, 496, 497, 498, 499 Σύγχρονα Θέματα Βιολογίας
- BIO491/492 Διπλωματική Εργασία Ι και II
- CS 428 Διαδίκτυο των Πραγμάτων: Προγραμματισμός και Εφαρμογές
- CS 434 Λογικός Προγραμματισμός και Τεχνητή Νοημοσύνη
- CS 435 Αλληλεπίδραση Ανθρώπου-Υπολογιστή
- CS 442 Μηχανική Μάθηση
- CS 445 Ψηφιακή Επεξεργασία Εικόνας
- ECE 421 Ευφυή Συστήματα (ή HMY634)
- ECE 429 Εισαγωγή στην Επεξεργασία Ψηφιακών Σημάτων (ή ECE 623)
- ECE 434 Εισαγωγή στην Φωτονική (ή ECE 645)
- ECE 473 Λιαθητήρες & Συστήματα Οργάνων (ή ECE 665)
- ECE 476 Βιοϊατρική Απεικόνιση (ή 6xx)
- MMVE 420 Ρομποτική
- MMVE 435 Εισαγωγή στην Βιολογική και Βιοϊατρική Μηχανική
- BM XXX Supervised studies on Biomedical Engineering
- BM XXX Special subjects on on Biomedical Engineering
Spring Semester (course names appear in Greek)

BIO003 Εισαγωγή στη Βιοπληροφορική
BIO 331 Υπολογιστική και Συστημική Βιολογία
BIO 442 Πρακτική Άσκηση στη Βιολογία
BIO 495, 496, 497, 498, 499 Σύγχρονα Θέματα Βιολογίας

CS 341 Τεχνητή Νοημοσύνη
CS 426 Γραφικά Υπολογιστών
CS 444 Συστήματα Υπολογιστικής Νοημοσύνης
CS 447 Υπολογιστική Όραση

ECE 370 Εισαγωγή στη Βιοϊατρική Μηχανική
ECE 425 Ρομποτική
ECE 471 Νευροψυχικολογία και Αισθήσεις (ή ECE 671)
ECE 478 Ψηφιακή Επεξεργασία Εικόνας (ή ECE 626)

MME 436 Μηχανική κυττάρων και ιστών
MME 451 Ανάλυση Στατικής και Δυναμικής Γραμμικής Ελαστικότητας με Πεπερασμένα Στοιχεία

BM XXX Supervised study on Biomedical Engineering
BM XXX Special subjects on Biomedical Engineering

The students can also enroll to up to 2 from the following master courses:

BIO 630 Νουκλεϊνικά Οξέα
BIO 650 Ειδικά Θέματα Βιοπληροφορικής
BIO 670 Όπτικη Απεικόνιση στη Βιολογία

CS 667 Νευροπληροφορική
CS 668 Υπολογιστική Όραση
CS 679 Ηλεκτρονική Υγεία
CS 680 Γνωστικός Προγραμματισμός

ECE 623 Εισαγωγή στην Επεξεργασία Ψηφιακών Σημάτων
ECE 626 Ψηφιακή Επεξεργασία Εικόνας
ECE 627 Μηχανική Όραση
ECE 634 Ευφυή Συστήματα
ECE 645 Εισαγωγή στην Φωτονική
ECE 665 Λιαθητήρες & Συστήματα Οργάνων
ECE 671 Νευροψυχικολογία και Αισθήσεις
ECE 6xx Βιοϊατρική Απεικόνιση

MME 555 Polymers in Medical Applications
MME 531 Μηχανική Συνεχών Μέσων
MME 532 Βιοϋλικά στη Μηχανική Ιστών και την Αναγεννητική Ιατρική

Short Description of Courses

Each course description includes the name of the instructor that offers the course in the current academic year 2019-2020. For the restricted courses that are not offered in this academic year, the name of the instructor who suggested the course is included instead. The language of instruction for most courses is Greek, whereas a small number of courses are offered in English. Courses taught in English are indicated.

CS111 Discrete Structures in Computer Science and Computation
Type: Compulsory for all directions
Level: Undergraduate
Semester: Fall
Credit: 7.5 ECTS units
Instructor: A. Pieris
Objectives: Introduction to basic mathematical concepts that are applicable to Computer Science. Development of mathematical way of thinking about problems. Provision of some necessary mathematical tools.
Prerequisites: --------
Bibliography:
Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).
Assessment: Final exam, midterm exam and homework.

CS121 Digital Systems
Type: Compulsory
Level: Undergraduate
Semester: Fall
Credit: 7.5 ECTS units
Instructor: C. Pattichis
Objectives: Introduce various representations of information in a digital computing system. Presentation of the building blocks of digital computing systems. Teach the basic methods for the design and analysis of digital systems. Practical implementation of a simple digital computing system.
Prerequisites: --------
Bibliography:
Teaching Methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).
Assessment: Final exam, midterm exam, quizzes and homework (final project and exercises).

CS131 Programming Principles
Type: Compulsory
Level: Undergraduate
Semester: Fall and Spring
Credit: 7.5 ECTS units
Instructor: E.Keravnou-Papailiou (fall/spring)
Development of procedural and object-oriented problem solving skills and algorithmic thinking. Provision of deep understanding of basic programming principles and algorithmic techniques, design, implementation, testing and debugging of modular programs. Understanding the important concepts of program abstraction and data abstraction. Mastering of a high-level programming language (Java).

**Content:** Presentation of the software development process and introduction to the basic principles of programming and program design using the Java language. Global overview of the Java language with emphasis on built-in and abstract data types, control structures, functions, modular programming and reusability.

**Prerequisites:**

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly), Laboratory sessions (3 hours weekly) and Recitation (1 hour weekly).

**Assessment:** Final exam, midterm exam, homework (programming assignments) and quizzes.

---

**CS133 Object Oriented Programming**

**Type:** Compulsory  
**Level:** Undergraduate  
**Semester:** Fall and Spring  
**Credit:** 7.5 ECTS units  
**Instructor:** M. Dikaiakos (Spring) / ……………… (Fall)

**Objectives:** Familiarization with Object Oriented Programming principles. Understanding of advanced concepts of the Java programming language.

**Prerequisites:** CS131

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly), Laboratory sessions (3 hours weekly) and Recitation (1 hour weekly).

**Assessment:** Final exam, midterm exam and homework.

---

**CS202 Explorations into Computer Science**

**Type:** Compulsory  
**Level:** Undergraduate  
**Semester:** Fall  
**Credit:** 3 ECTS units  
**Instructor:** A. Pitsillides / ……………

**Objectives:** Introduction to topics that compose a global picture of Computer Science. Creation of enthusiasm and interest in Computer Science. Update about current developments in Computer Science. Familiarization with practical applications of Computer Science.

**Content:** Weekly lecturers/seminars that cover a broad spectrum of Computer Science and its basic areas, starting from its birth and reaching its modern evolutions. Revolutionary ideas for the foundation and development of Computer Science.

**Prerequisites:**

**Bibliography:**

**Teaching methods:** Lectures / Seminars (1.5 hours weekly).

**Assessment:** Group project and presentation, class participation and attendance.
**CS211 Theory of Computation**

*Type:* Compulsory  
*Level:* Undergraduate  
*Semester:* Spring  
*Credit:* 7.5 ECTS units  
*Instructor:* A. Philippou  

**Objectives:** Introduction to foundational concepts of the Theory of Computation. Development and cultivation of formal and syllogistic reasoning. Familiarization with fundamental techniques for proofs and mathematical reasoning. Realization of the limitations on the capabilities of computers.  

**Content:** Formal methods of computation based on machines, grammars and languages: finite automata vs. regular languages; pushdown automata vs. context-free grammars; Turing machines vs. unrestricted grammars. Models of computation equivalent to Turing machines and Church’s Thesis. Computability and Uncomputability. Introduction to Theory of Computational Complexity with emphasis on the Theory of NP-completeness.  

**Prerequisites:** CS111, MAS012  

**Bibliography:**  

**Teaching methods:** Lectures (3 hours weekly) and Recitation (1 hour weekly).  

**Assessment:** Final exam, midterm exam and homework.  

---

**CS221 Computer Organization and Assembly Language Programming**

*Type:* Compulsory  
*Level:* Undergraduate  
*Semester:* Fall  
*Credit:* 7.5 ECTS units  
*Instructor:* Y. Sazeides / H. Volos  

**Objectives:** Introduction to the basic concepts and methods of computer organization. Present trends of various computer technology parameters. Introduction of the concept of instruction set architecture. Teach different instruction sets and assembly programming. Design of a pipelined datapath. Learn basic principles of memory hierarchy. Implement a simple computing system. Practical experience in the Digital Logic and Microprocessors Laboratory.  

**Content:** Introduction to computer organization and architecture. Types of instructions, coding of instructions, Arithmetic and Logic Unit. Basic principles of the organization of the main functional units of a computer system at machine level: Central Processing Unit (CPU), memory, and Input/Output. Interfacing CPU and peripheral units. Programming in assembly language for MIPS R2000/R3000 and Intel Pentium.  

**Prerequisites:** CS121, CS131  

**Bibliography:**  

**Teaching Methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).  

**Assessment:** Final and midterm exams, quizzes and homework (final project and exercises).  

---

**CS222 Operating Systems**

*Type:* Compulsory  
*Level:* Undergraduate  
*Semester:* Spring  
*Credit:* 7.5 ECTS units  
*Instructor:* G. Papadopoulos  

**Objectives:** Introduction to the basic principles of design and operation of modern operating systems. Familiarization with the various operation levels and mechanisms, case studies
involved operating systems like UNIX and Windows as well as the dual role of the operating system, as manager of the various parts of the computer hardware and supplier of offered services to the user.

**Content:** Introduction, history and evolution of operating systems. General structure, operations and characteristics of an operating system. Concurrency. Process management. Scheduling and dispatch. Real and virtual memory management. I/O management and disk scheduling. File management.

**Prerequisites:** CS221, CS232

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework (theoretical and programming assignments).

---

**CS231 Data Structures and Algorithms**

**Type:** Compulsory

**Level:** Undergraduate

**Semester:** Fall and Spring

**Credit:** 7.5 ECTS units

**Instructor:** M. Mavronicolas (Fall) / ………….. (Spring)

**Objectives:** Familiarization with data structures and the algorithms manipulating them. Appreciation of the importance of careful organization of information for efficient searching and modification. Acquaintance with techniques for the analysis of algorithm efficiency. Developments of capabilities for designing algorithms to minimize their execution time and space requirements.

**Content:** Study of data structures for the organization and efficient processing of data. Linear and non-linear data structures. Hashing techniques. Sorting algorithms. Graph algorithms. Introduction to algorithm design techniques. Analysis of the average and worst-case complexity of algorithms.

**Prerequisites:** CS111, CS132

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework (theoretical and programming assignments).

---

**CS232 Programming Techniques and Tools**

**Type:** Compulsory

**Level:** Undergraduate

**Semester:** Fall

**Credit:** 7.5 ECTS units

**Instructor:** D. Zeinalipour

**Objectives:** The course teaches intermediate and advanced programming concepts, techniques and tools through a language that compiles to machine code. The course familiarizes the students with advanced programming constructs utilized for handling memory and files. Advanced topics in compilation, debugging, documentation and optimization of software. Methodological aspects in developing large-scale system software that addresses complex problems. Basic commands for programmers in the UNIX operating system.

**Content:** i) Introduction to C for Programmers: types x86/x64, loops, selections, expressions, arrays, functions, IO, basic program organization, ii) Advanced C programming constructs: program anatomy and processes, memory and addresses (pointers, pointers and arrays,
strings and examples), structures, unions and enumerations. Linear and non-linear programming data structures (dynamic memory allocation, lists, queues, doubly-linked lists, trees, applications and examples). iii) Advanced Compilation Topics and Tools: preprocessor directives, compiling multiple files with makefiles, static (.a) and dynamic (.so) linking of object files (.o), error handling (assert.h), static and dynamic code analysis (valgrind and gprof). iv) low-level programming (binary operators and examples, binary files and hexdump). v) Basic commands for programmers in the UNIX operating system: file system, redirection and pipes, permissions and basic filters.

**Prerequisites:** CS 131

**Bibliography:**

4. Η Γλώσσα C σε Βάθος, Νίκος Χατζηγιαννάκης, Τρίτη Έκδοση, Κλειδάριθμος, 2009.

**Teaching methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam, and homework (theoretical and programming assignments).

---

**CS236 Algorithms and Complexity**

*Type:* Compulsory  
*Level:* Undergraduate  
*Semester:* Spring  
*Credit:* 7.5 ECTS units  
*Instructor:* M. Mavronicolas (Fall) / Ch. Georgiou (Spring)

**Objectives:** Familiarization with fundamental techniques of designing and analyzing algorithms. Familiarization with significant algorithms in various fields that have been suggested in the literature. Familiarization with techniques for implementing and empirically evaluating algorithms.

**Content:** Topics in the design and analysis of efficient algorithms and their complexity. Significant algorithms in Graph Theory, Algebra, Geometry, Number Theory and Combinatorics. General algorithmic techniques (e.g., divide-and-conquer, backtracking, dynamic programming). Randomized, Parameterized and Approximation algorithms. Fast Fourier Transform. Inherent lower bounds on problem complexity.

**Prerequisites:** CS231

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Recitation (2.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework (theoretical and programming assignments).

---

**CS324 Communications and Networks**

*Type:* Compulsory  
*Level:* Undergraduate  
*Semester:* Fall  
*Credit:* 7.5 ECTS units  
*Instructor:* A. Pitsillides / V. Vassiliou

**Objectives:** Familiarization with fundamental topics in communication networks, with a focus on the Internet.

**Content:** Introductory course in Communication Networks. The goal is the understanding and use of concepts related to fundamental issues in Communication Networks, using the
Internet as an example. Deals with Networking layers, such as the application, transport, network, and data link layers. Open systems and internetworking. Networking technologies including wired and wireless Local Area Networks and network topologies. Algorithms, including routing and congestion control. Introduction to quality of service (QoS) and multimedia applications. Introduction to emerging networking topics, as e.g. the Internet of Things and 5G/5G. Laboratory session includes practical exercises with wireshark and simulations using OPNET.

**Prerequisites:** CS131

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework (including laboratory exercises).

### CS325 Parallel Processing

**Type:** Compulsory

**Level:** Undergraduate

**Semester:** Spring

**Credit:** 7.5 ECTS units

**Instructor:** Y. Sazeides / H. Volos

**Objectives:** Introduction to the fundamental concepts of Parallel Processing with emphasis on parallel machines and parallel programming.

**Content:** The entire spectrum of parallel machines as appearing in Flynn’s classification: SISD, SIMD, MISD, MIMD. The main approaches for design and operation of multiprocessor systems. Conventional and non-conventional machines (Data-flow and reduction). Parallel programming approaches: (1) Automatic-parallelizing compilers, (2) Extending serial languages with parallelizing constructs, (3) parallel languages for Functional Programming. Special emphasis on parallel architectures and parallel programming.

**Prerequisites:** CS221

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Recitation (1 hour weekly).

**Assessment:** Final exam, midterm exam, homework and final project.

### CS326 Systems Security

**Type:** Compulsory

**Level:** Undergraduate

**Semester:** Spring

**Credit:** 7.5 ECTS units

**Instructor:** E. Athanasopoulos

**Objectives:** Introduction to systems security which covers a wide range of concepts. Primarily, the course helps students to become familiar with different research areas of modern systems security by covering topics such as applied cryptography, software vulnerabilities and exploitation, defenses, mobile security, web security, network security, privacy, and anonymity. Additionally, students will be able to perform engineering tasks in cryptography, software exploitation, network security, and program analysis.

**Prerequisites:** CS232
Bibliography:

4. Published papers.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam and homework (including laboratory assignments).

**CS341 Artificial Intelligence**

*Type*: Compulsory  
*Level*: Undergraduate  
*Semester*: Spring  
*Credit*: 7.5 ECTS units  
*Instructor*: Y. Dimopoulos

**Objectives**: Introduction to the fundamental principles and techniques that underline software systems that exhibit “intelligent” behavior. Upon completion of this course, students will have acquired a good understanding of modern Artificial Intelligence, the problems that it addresses and the fundamental solution methods that it uses.

**Prerequisites**: CS231

**Bibliography**:

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework (theoretical and programming assignments).

**CS342 Databases**

*Type*: Compulsory  
*Level*: Undergraduate  
*Semester*: Fall  
*Credit*: 7.5 ECTS units  
*Instructor*: D. Zeinalipour

**Objectives**: Introduction to the basic principles needed for the design and the use of a database. Provision of practical exercises in the application of these concepts with the use of an industrial system for database.

**Content**: Introduction to Databases. Organization and proper management of large quantities of data for use in applications. Database models such as the entity–relation model, the relational model, the network model and the hierarchical model.

**Prerequisites**: CS231

**Bibliography**:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).
CS343 Software Engineering

*Type:* Compulsory  
*Level:* Undergraduate  
*Semester:* Fall  
*Credit:* 7.5 ECTS units  
*Instructor:* G. Kapitsaki

**Objectives:** Familiarization with and assimilation of the approaches, methodologies, models and tools used to develop quality software systems. Understanding of software architectures, software modeling and testing. Understanding of software testing process and of software architecture design patterns. Applications of software creation methodologies on the construction of a real software system. Understanding of software testing procedures. Use and application of architecture design patterns.

**Content:** Methods, tools, and procedures for the development and maintenance of large-scale software systems. Existing life-cycle models (e.g. waterfall model). Introduction to Agile development. Requirements analysis and specification techniques. Software development methodologies. Unified Modelling Language (UML) and supported static and dynamic diagrams. Code transformation. Practical experience with CASE tools for modeling data and procedures (Modelio). Prototyping for Web applications (HTML, CSS). Architectural Design patterns (Model View Controller etc.). Software verification and validation. Unit testing and frameworks (JUnit etc.). CASE tools. Project planning and management.

**Prerequisites:** CS133

**Bibliography:**

4. *Teaching methods:* Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).  
*Assessment:* Final exam, midterm exam and homework assignments.

CS344 Internet Technologies

*Type:* Restricted choice  
*Level:* Undergraduate  
*Semester:* Fall or Spring  
*Credit:* 7.5 ECTS units  
*Instructor:* --------------

**Objectives:** Introduction to Internet and the World-Wide Web Technologies. Emphasis on WWW protocols and programming of Internet Systems and Services.

**Content:** Internet Fundamentals, Principles of Hypertext, HTML and Mark-up Languages, Cascading Style Sheets, Page Layouts, Web Design & Development, Dynamic content and HTML Forms, Client-Side Programming, Introduction to Web2.0 principles and AJAX.

**Prerequisites:** CS133, CS324

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).  
*Assessment:* Final exam, midterm exam, and homework assignments.

CS412 Logic in Computer Science

*Type:* Restricted choice  
*Level:* Undergraduate  
*Semester:* Fall
Credit: 7.5 ECTS units  
Instructor: A. Philippou

Objectives: The main objective of the course is to prepare students for using logic as a formal tool in Computer Science. Furthermore, it aims to develop and cultivate formal and syllogistic reasoning and provide a thorough introduction to computational logic and its applications in Computer Science.

Prerequisites: CS11

Bibliography:

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework.

CS414 Basic Principles of Programming Languages

Type: Restricted choice  
Level: Undergraduate

Objectives: The objective of the course is to study the basic principles of programming languages through the representation of basic programming notions into a uniform mathematical framework. At the same time, the course will follow the practical application of the notions under study into popular programming languages. In particular, the course will study the abstract syntax, the syntax, semantics, and the practical application of functional, procedural, object-oriented, and programming structures. Attention will be given to the static (type systems) and dynamic (execution behavior) properties of programming languages, as well as the notions of type soundness and execution safety. The course will introduce principles/notions of distributed programming and study modern execution safety problems in a distributed setting.

Content: History of Programming Languages. λ-calculus. Functional Programming (The Haskell programming language, Haskell type system, Haskell’s Type Inference, Pure vs impure programming languages). Procedural and Object-Oriented Programming (Basic object-oriented programming notions, Mathematical representation of the Java programming language). Distributed programming (Actors programming model, Process Calculi as mathematical models for representing distributed programming).

Prerequisites: CS211, CS231

Bibliography:

1. B. C. Pierce, Types and Programming Languages, The MIT Press.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam and homework.

CS420 Computer Architecture

Type: Restricted choice

Level: Undergraduate
**Semester:** Fall  
**Credit:** 7.5 ECTS units  
**Instructor:** Y. Sazeides  

**Objectives:** Introduction to current methodology for performance evaluation and comparison of computer systems. Presentation of basic and advanced concepts in the organization of modern microprocessors. Examination of current trends in the computer architecture area.  

**Content:** Introduction to the state-of-the-art uniprocessor, high performance computer architecture. Emphasis on quantitative analysis and cost/performance trade-offs in the design of the basic units of a processor: instruction set, pipelining, memory system and input/output systems. Qualitative analysis of real machines and their performance data.  

**Prerequisites:** CS222  

**Bibliography:**  
2. Selected research articles  

**Teaching Methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).  

**Assessment:** Final exam, midterm exam and homework (project and exercises).

---

**CS421 Systems Programming**  
**Type:** Restricted choice  
**Level:** Undergraduate  
**Semester:** Spring  
**Credit:** 7.5 ECTS units  
**Instructor:** D. Zeinalipour  

**Objectives:** The main objective of this undergraduate course is to allow students develop complex system-level software in the C programming language while gaining an intimate understanding of the UNIX operating system (and all OS that belong to this family, such as Linux, the BSDs, and even Mac OS X). Topics covered will include the user/kernel interface, fundamental concepts of UNIX, user authentication, basic and advanced I/O, filesystems, signals, process relationships, and inter-process communication. Fundamental concepts of software development and maintenance on UNIX systems will also be covered. The taught concepts have an application to the whole family of UNIX OSs (e.g., Linux, MacOS, HP-UX, AIX, Solaris, Android, iOS, Raspbian) but also apply to Windows (e.g., Powershell and windows system calls).  

**Contents:**  
1) Advanced commands of the UNIX operating system for administrators: filters with regular expressions, system utilities and stream editors (awk, sed).  
2) Advanced shell programming with an emphasis on Bash: environment, control structures, debugging.  
3) Low-level I/O system calls with C.  
4) Process management: environment, control and signals, inter-process communication (IPC) with an emphasis on pipes and named pipes (FIFO), XSI IPC: semaphores, shared memory and message queues, network IPC (TCP Sockets) and the client/server model.  
5) Multithreaded programming, concurrency and performance aspects. Implementing network protocols from RFC documents.  
6) System security aspects, managing cluster computers and clouds: virtualization, data centers and Green IT.  

**Prerequisites:** CS222  

**Bibliography:**  

**Teaching Methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).  

**Assessment:** Final exam, midterm exam, programming assignments.
CS422 Advanced Networks
Type: Restricted choice
Level: Undergraduate
Semester: Spring
Credit: 7.5 ECTS units
Instructor: V. Vassiliou / A. Pitsillides
Language: English
Objectives: Extension of the basic knowledge about Computer Networks regarding architectures, techniques and protocols for the Internet.
Content: Advanced topics in Computer Networks and the Internet, such as: IPv6, Multicast Routing, QoS Routing, TCP Congestion Control, Performance Analysis, Multimedia Networking Applications, Realtime services and protocols, Quality of Service, MPLS, Traffic Engineering, Mobile and Wireless Networks, Issues in Security for Computer Networks. Introduction to advanced research topics (e.g. Internet of Things, wireless sensor networks, VANETs, 5G, Nanonetworks). Introduction to Network Management, Software Defined Networks. Cloud and Fog Computing.
Prerequisites: CS324
Bibliography:
Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).
Assessment: Final exam, midterm exam and homework (including laboratory exercises).

CS423 Network and Information Security
Type: Restricted choice
Level: Undergraduate
Semester: ------------
Credit: 7.5 ECTS units
Instructor: V. Vassiliou
Content: Introduction to Security Threats and Attacks, Cryptographic Techniques (encryption, cryptanalysis, authentication, confidentiality), identification and authentication (Kerberos, PKI), Internet Application security protocols (PGP, SSL/TLS), Network security (Firewalls, IDS), Defending against threats on endsystems, Checking of networks and applications for vulnerabilities, Other issues in network and information security (privacy, ethics, legal framework).
Prerequisites: CS324
Bibliography:
Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory (1.5 hours weekly).
Assessment: Final exam, midterm exam and homework.

CS424 Digital Signal Processing
Type: Restricted choice
Level: Undergraduate
Semester: .............
Credit: 7.5 ECTS units
Instructor: A. Pitsillides

Prerequisites: CS111, MAS016, MAS017

Bibliography:

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam and homework (laboratory exercises, additional exercises, final project).

CS426 Computer Graphics

Type: Restricted choice
Level: Undergraduate
Semester: Fall or Spring
Credit: 7.5 ECTS units
Instructor: Y. Chrysanthou / .............
Language: English

Objectives: Introduction to the basic principles of digital image synthesis. Explain how a 3-dimensional virtual world is defined starting from the geometry, the materials, the lights and cameras and how the 2-dimensional resulting image is produced by going through the graphics pipeline. Provision of both the theoretical foundations as well as practical skills through the use of industry standards, such as OpenGL or DirectX.

Content: Scene construction, scene hierarchies, camera specification, projections of primitives, clipping, visible surface determination, polygon rasterisation (z-buffer), texture mapping, local and global illumination, shadows, ray tracing, radiosity, real-time acceleration techniques.

Prerequisites: CS232

Bibliography:

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam and homework.

CS427 Mobile Computer Networks

Type: Restricted Choice
Level: Undergraduate
Semester: Fall or Spring
Credit: 7.5 ECTS units
Instructor: A. Pitsillides / .............

Objectives: The objective of this course is to introduce students into wireless mobile/local/cellular networks with an emphasis on the fundamental concepts and principles of the technology which are important for the design, application, evaluation and development of these systems. The course will also cover new architectures and topologies, existing and proposed standards as well as open research issues.

Content: Wireless environment, Interference and other problems in wireless communications, Architectures and technologies of wireless networks and wireless communication, Wireless MAC protocols, Wireless Local Area Networks (WLAN), Mobile Networks (emphasis on latest architectures, 3G, 4G, 5G), Mobility Management, wireless network technologies (ad-hoc, sensor, vehicular networks, Internet of Things), Open research issues and challenges.
Prerequisites: CS324

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam and homework.

**CS428 Internet of Things: Programming and Applications**

*Type*: Restricted Choice  
*Level*: Undergraduate  
*Semester*: Fall or Spring  
*Credit*: 7.5 ECTS units  
*Instructor*: C. Pattichis  
*Language*: English

**Objectives**:--------

**Content**: Programming of embedded systems. Introduction to the Internet of Things.  

**Prerequisites**: CS221, CS222

**Bibliography**:

**Teaching methods**: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory (1.5 hours weekly).

**Assessment**: Final exam, midterm exam and homework.

**CS429 Theory and Practice of Compilers**

*Type*: Restricted choice  
*Level*: Undergraduate  
*Semester*: Fall or Spring  
*Credit*: 7.5 ECTS units  
*Instructor*: E. Athanasopoulos

**Objectives**: Introduction to advanced techniques of compiler design and implementation.

**Content**: Fundamental principles of compiler design. Relation of translators to formal languages and automata theory. Lexical, syntactic and semantic analysis, code generation and optimization, etc. Practical exercises using lex and yacc.

**Prerequisites**: CS211, CS231

**Bibliography**:

**Teaching methods**: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment**: Final exam, midterm exam and homework (theoretical and diagnostic assignments and semester project).

**CS431 Synthesis of Parallel Algorithms**

*Type*: Restricted choice  
*Level*: Undergraduate  
*Semester*: Fall or Spring  
*Credit*: 7.5 ECTS units
Instructor: Chr. Georgiou

Objectives: Introduction to the fundamental techniques of parallel algorithm design and the use of these techniques in designing and analyzing parallel algorithms for basic problems. Introduction to the basic failure types appearing in parallel computing and the appropriate fault-tolerance techniques.

Prerequisites: CS231

Bibliography:

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).
Assessment: Final exam, midterm exam and homework (theoretical assignments).

CS432 Distributed Algorithms

Type: Restricted choice
Level: Undergraduate
Semester: Fall or Spring
Credit: 7,5 ECTS units
Instructor: M. Mavronicolas

Objectives: Familiarization with the fundamental concepts of the Theory of Distributed Computing. Development of capabilities of designing, proving correct and analyzing distributed algorithms. Cultivation of syllogistic and mathematical approach to the field of distributed algorithms.

Content: Formal models of distributed computing: shared memory versus message passing, determinism versus randomization, concepts of synchronism, asynchrony and real-time. Design and analysis of distributed algorithms and impossibility/improbability results for fundamental problems such as mutual exclusion, consensus, synchronization, leader election, construction of minimum spanning trees. Fault tolerance: Byzantine generals, wait-free algorithms, fault degrees. Formal methods for proving correctness of distributed algorithms. Advanced topics. Special emphasis throughout the course on lower and upper bounds on time and memory.

Prerequisites: CS211, CS231

Bibliography:

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).
Assessment: Final exam, midterm exam, homework, participation in class and attendance.

CS433 Constraint Programming and Satisfaction

Type: Restricted choice
Level: Undergraduate
Semester: Fall or Spring
Credit: 7,5 ECTS units
Instructor: Y. Dimopoulos

Objectives: A significant number of problems in Computer Science over a wide spectrum are special cases of Constraint Satisfaction problem. This course introduces ways to approach such problems and the associated software. Students will be able to understand the structure and the behavior of Constraint Satisfaction problems and will get exposure to basic algorithms solving them. They will get experience over tools for Constraint Programming, the range of solvable problems and their applications to problem solving.

Prerequisites: CS111, CS231

Bibliography:

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).
Assessment: Final exam, midterm exam and homework (programming assignments).

**CS434 Logic Programming and Artificial Intelligence**

Type: Restricted choice  
Level: Undergraduate  
Semester: Fall or Spring  
Credit: 7.5 ECTS units  
Instructor: A. Kakas  
Language: English  

Objectives: Familiarization with the basic concepts of Logic Programming and practical exercises in implementing them with the PROLOG language. Development of capabilities of applying Logic Programming to problems of Artificial Intelligence.  

Content: Basic principles of Logic Programming and implementation using the language Prolog. Relation of Logic Programming to modern considerations regarding Artificial Intelligence. Solving application problems drawn from the fields of Artificial Intelligence and the Semantic Web, making use of Logic Programming and Constraint Logic Programming.  

Prerequisites: CS111  

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1 hour weekly).
Assessment: Final exam, midterm exam and homework.

**CS435 Human Computer Interaction**

Type: Restricted choice  
Level: Undergraduate  
Semester: Spring  
Credit: 7.5 ECTS units  
Instructor: G. Papadopoulos  

Objectives: Appreciation of the importance of designing good user interfaces and the relation of user interface design and the way users interact with computers. Experience with applying a well-known methodology for designing interactive systems, starting from identifying user’s needs, to applying usability evaluation methods.

Content: Analysis of the human as a computer system user (knowledge models, graphical animation, cognitive models). Interactive technologies (input-output devices, window environments, systems for collaborative support, virtual reality). Methodologies for the design of interactive systems.

Prerequisites: --------

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).
Assessment: Final exam, midterm exam and homework.
CS441 Advanced Software Engineering
Type: Restricted Choice
Level: Undergraduate
Semester: Spring
Credit: 7.5 ECTS units
Instructor: G. Papadopoulos
Language: English
Objectives: Familiarization and understanding of advanced principles, concepts and practices of software engineering. A number of contemporary areas of software engineering will be covered. This course further serves as a “roadmap” for advanced electives and graduate courses in software engineering.
Prerequisites: CS343
Bibliography:
Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).
Assessment: Final exam, midterm exam, homework (theoretical problems – study / analysis of a software system) and laboratory exercise.

CS442 Machine Learning
Type: Restricted Choice
Level: Undergraduate
Semester: Fall
Credit: 7.5 ECTS units
Instructor: Ch. Christodoulou
Objectives: Familiarization with theoretical and practical issues involved in Machine Learning. Study of machine learning methods as they have been developed in recent years. Implementation and assessment of Machine Learning systems.
Content: Introduction to Pattern Recognition, Multilayered Neural Networks and backpropagation learning algorithm, Deep Learning and Convolutional Neural Networks, Recurrent Neural Networks, Self-Organising Maps, Radial Basis Functions, Reinforcement Learning, Hopfield Networks & Boltzmann Machines. Survey of the developments in artificial intelligence, machine learning, expert systems, cognitive science, robotics and artificial neural networks, which contributed to the development of the theory of machine learning systems.
Prerequisites: CS231
Bibliography:
1. C. M. Bishop, Neural Networks for Pattern Recognition, Oxford University Press, 1995.
Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).
Assessment: Final exam, midterm exam and homework (laboratory exercises).

CS443 Software Reuse
Type: Restricted Choice
Level: Undergraduate
Semester: Fall or Spring
Credit: 7.5 ECTS units
Instructor:  

**Objectives:** Understanding the usefulness of software reuse. Deepening in the different levels of reuse and understanding the differences between them. Use of software components in practice.

**Prerequisites:** CS233, CS343

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam, homework and semester project.

---

**CS444 Computational Intelligent Systems**

**Type:** Restricted Choice  
**Level:** Undergraduate  
**Semester:** Spring  
**Credit:** 7.5 ECTS units  
**Instructor:** Chr. Christodoulou

**Objectives:** Global overview of Computational Intelligence and its applications in solving "real" problems in various disciplines such as decision making support, classification, prognosis and prediction, system optimization and recreational design. Moreover there will be an introduction to computational neuroscience/neuroinformatics as well as in cognitive science.

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework (laboratory exercises, additional exercises, final project).

---

**CS445 Digital Image Processing**

**Type:** Restricted Choice  
**Level:** Undergraduate  
**Semester:** Fall
Credit: 7.5 ECTS units
Instructor: C. Pattichis
Language: English
Prerequisites: CS133, MAS029

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).
Assessment: Final exam, midterm exam and homework (laboratory exercises, additional exercises, final project).

CS446 Advanced Topics in Databases
Type: Restricted Choice
Level: Undergraduate
Semester: Spring
Credit: 7.5 ECTS units
Instructor: D. Zeinalipour
Objectives: Familiarization with advanced topics in the design and management of Databases (and special kinds of those). Exposure to significant open problems and research directions in the field of Databases.
Content: Theoretical approach to logical and physical design of databases. Algorithms for logical and physical design of databases. Primary and secondary indexing techniques. Advanced query processing and query optimization. Query parallelism. Concurrency control and recovery, integrity and security of data. Distributed databases and introductory concepts distributed transaction processing involving multiple and heterogeneous databases. Problems of interfacing a database with software.
Prerequisites: CS342

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).
Assessment: Final exam, midterm exam, programming exercises and presentation.

CS447 Computer Vision
Type: Restricted Choice
Level: Undergraduate
Semester: Fall
Credit: 7.5 ECTS units
Instructor: C. Pattichis
Objectives: Familiarity with the basic concepts and methods of developing a simple computerized vision system. Introduction and understanding of commands in a programming language to support the required functionality for developing computational vision systems. Development of applications utilizing the previous.
Content: Basic concepts and methodologies relating to the subject of Computer Vision. Image information, image processing, feature extraction. Image segmentation, clustering, multiple-image processing, case studies.
Prerequisites: CS231, MAS016

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1 hour weekly).
Assessment: Final exam, midterm exam, programming exercises and presentation.

CS448 Data Mining on the Web

Type: Restricted Choice
Level: Undergraduate
Semester: Spring
Credit: 7.5 ECTS units
Instructor: G. Pallis

Content: Data mining on the Web refers to the automatic discovery of interesting and useful patterns from the data associated with the usage, content, and the linkage structure of Web resources. It has quickly become one of the most popular areas in computing and information systems because of its direct applications in e-commerce, information retrieval/filtering, Web personalization, and recommender systems. The primary focus of this course is on examining techniques from data mining to extract useful knowledge from Web data. This course will be focused on a detailed overview of the data mining process and techniques, specifically those that are most relevant to Web mining. Several topics will be covered such as Map-Reduce framework, Web data clustering, classification, association rules, recommendation systems, link analysis, social networks and Web advertising.

Prerequisites: CS231, CS342

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).
Assessment: Final exam, midterm exam, homework (programming and theoretical assignments) and semester project.

CS449 Professional Practice in Software Engineering

Type: Restricted Choice
Level: Undergraduate
Semester: Spring
Credit: 7.5 ECTS units
Instructor: G. Kapitsaki
Language: English

Objectives: Embedding and practical application of the theoretical approaches and methodologies of Software Engineering for the development of a product-software system that serves the needs of an organization belonging to the local market. Practical use of processes and tools, such as central and distributed version control systems (SVN and GitHub), testing at different levels, group communication, professionalism, and ethical conduct.

Content: Undertake and carrying out to completion a significant software project by small student groups (of about 2-6 students each). All phases in the development of software. Some
of the specific projects come from the industrial sector. Version control systems (Git and GitHub). Use of the Scrum development methodology (Scrum review meeting, Scrum retrospective, etc.). Testing and automated testing. Software system analysis through software metrics. Specialized issues depending on the project nature (e.g., deployment on web servers, GUI tools and frameworks etc.).

Prerequisites: CS343

Bibliography:

1. Selected articles

Teaching methods: Students are grouped in teams of 2-6 persons. Meetings/discussions are held regularly (weekly per team), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Assessment of the product-software system, assessment of the corresponding documentation, quizzes, oral presentation and final exam.

CS450 Network Management and Services

Type: Restricted Choice
Level: Undergraduate
Semester: Fall
Credit: 7.5 ECTS units
Instructor: A. Pitsillides
Language: English

Objectives: Familiarization with fundamental topics in the management of communication networks, with a focus on the Internet and latest trends, including SDN, OpenFlow, and Network Virtualisation.

Content: Network management is an essential component in today’s networks, as the world increasingly relies on networked systems and services to function. Network Management and Services, provides you with an accessible overview of network management covering management not just of networks themselves, either ‘physical’ or ‘virtualised’, but also of services running over those networks. This course aims to introduce the Network Management Fundamentals, explain the different technologies that are used in network management, and how they relate to each other. In particular it will provide more detail into the different management reference models, such as Fault, Configuration, Accounting, Performance, and Security (FCAPS), the different building blocks of network management, the protocols used, e.g. SNMP, the organization of data, and the management communication aspects. Newer trends in networking and its management, including virtualisation of the network itself (e.g. Software Defined Networks, OpenFlow, Network Function Virtualisation, Virtual Infrastructure Management, Network Service, NFV Management and Service Orchestration). Other services, such as the cloud (e.g. OpenStack) will also be studied.

Prerequisites: CS324

Bibliography:

1. Literature on the EPL 450 website, especially on the network virtualization (e.g. Software Defined Networks, OpenFlow, Network Function Virtualisation, Virtual Infrastructure Management, Network Service, NFV Management and Service Orchestration).

Teaching methods: The course combines lectures and tutorials with assignments, labs and experimentation with networking management techniques and tools. It will be delivered in the form of Seminars, which will cover theory and be intertwined with hands-on experience in a real context, where students will apply theory, techniques and available tools in a real network. Seminar type Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Individual project, assignments and laboratory work. No exams will be given.
CS481 Software Engineering for Software as a Service

Type: Restricted Choice  
Level: Undergraduate  
Semester: ........  
Credit: 7.5 ECTS units  
Instructor: G. Kapitsaki  

Objectives: Understanding of advanced concepts of software engineering. Use of Agile software methodology with applications for cloud computing. Practice via the implementation of a software system. Regression testing.

Prerequisites: CS343

Bibliography:
2. Selected articles from the literature.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam, homework and semester project.

CS482 Software Validation, Verification and Quality

Type: Restricted Choice  
Level: Undergraduate  
Semester: ........  
Credit: 7.5 ECTS units  
Instructor: G. Kapitsaki / G. Papadopoulos  

Objectives: Teaching and assimilation of basic and specialized concepts on software validation and verification. Acquisition of knowledge for designing and implementing different types of audits and debugging procedures. Deepening in concepts and practices for ensuring quality in software systems.

Content: Basic concepts and terminology for validation and verification, reviews, inspections, control (parts, system combination, regression, acceptance, coverage criteria), control of specific categories of software systems, analyzing problems and documentation. Basic principles of quality factors and quality characteristics of software, methodologies, tools, quality procedures, quality standards, models and quality metrics, quality software production process, quality plan, organize quality assurance process, quality assessment process.

Prerequisites: CS343

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam, homework and laboratory assignments.

CS 483 Software Analysis, Modelling and Design

Type: Restricted Choice  
Level: Undergraduate  
Semester: ........  
Credit: 7.5 ECTS units
Instructor: G. Kapitsaki / G. Papa
dopulos

Objectives: Deepening in fundamental concepts of software analysis, modelling and design. Design of effective, efficient and competitive software products. Training in software architectures, notations, standards and methods.

Content: Fundamental concepts of software modeling (principles, conditions, properties), modeling languages, virtual models, model types. Early analysis (consistency, sufficiency, accuracy, quality). The role of models in the development and the connection with software development methodologies. Model-driven engineering. The role of software architecture in the software development lifecycle (user needs, design, implementation). The architectural design of a software system. Architectural representation.

Prerequisites: CS343

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam, homework and laboratory assignments.

**CS 499 Special Issues in Computer Science**

Type: Restricted Choice

Level: Undergraduate

Semester: Summer

Credit: 7.5 ECTS units

Instructor: E. Athanasopoulos / Chr. Georgiou / M. Dikaiakos

Objectives: The objective of this course is to promote the technology culture in the undergraduate program of the Computer Science Department. The course focuses on a specific topic of Computer Science. Further information regarding the prerequisites, description, requirements and assessment of the course will be presented when the course is announced on the Department’s website.

Content: The content of the course is formulated according to the specific topic.

Prerequisites: The consent of the instructor.

Bibliography: 

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam and homework (laboratory exercises and additional exercises).

**CS 500 Industrial Placement**

Type: Restricted Choice

Level: Undergraduate

Semester: Summer

Credit: 7.5 ECTS units

Instructor: E. Athanasopoulos / Chr. Georgiou / M. Dikaiakos

Objectives: Linking and applying in a real work environment the knowledge that students have acquired in the curriculum courses. Bringing students in direct contact with the new trends and needs of the industrial market as well as the demand for specific skills and competencies. Providing the students with a first experience and opportunity to adapt to a working environment and to recognize the requirements of a professional space as well as the possibility of demystifying some fears about this space: all necessary for the preparation for future entry into the industry market. In exceptional cases, it may be a precursor to future professional cooperation between the student and the employer.

Content: The industrial placement provides students with employment for a short period of time in a real work environment and on a subject related to the curriculum of the Department of Computer Science.
Prerequisites: Completion of the 3rd year of study (completion of at least 156 ECTS).

Bibliography:  

Teaching methods:  

Assessment: Final report.

Courses from Department of Business and Public Administration

BPA 369 Principles of Entrepreneurship and Innovation

Type: Compulsory
Level: Undergraduate
Semester: Spring
Credit: 7.5 ECTS units
Instructor: Daina Nicolaou

Objectives: To explain the process of innovation and entrepreneurship (inter-dependent concepts) in an understandable and simple way. Additionally, students will be guided through identifying a business opportunity to setting up and growing a business (including how to perform a successful exit). The lectures are based on academic theory, but the emphasis is focused on the practical application of this theory. To familiarize students with theory and practice about entrepreneurship and the management of new businesses while simultaneously emphasizing the role played by new business ideas for the economy.

Content: Key Partners, Key activities, Key resources, Value creation, Customer Segments, Communication/Distribution channels, Customer Relationships, Cost structure and Expenses, Revenue streams. Additional topics: business plans, venture capital firms, angel investors, intellectual property protection, sources and diffusion of innovation.

Prerequisites:  

Bibliography:

Teaching methods: Lectures, talks by entrepreneurs, visits to companies, case studies, project preparation.

Assessment: Final exam, group assignment, activities (e.g. business model presentation, pitching), attendance and participation.

Courses for Other Departments

These courses are offered to students of other Departments. The content of such courses is suitably determined so that students in other disciplines may appreciate the significance of Computer Science, its relationship to other disciplines, and the potential benefits it offers. Each of the courses for other Departments carries 5, 6 or 7 ECTS units. The courses may be offered every semester or in parallel classes, depending on the needs and capabilities.

CS001 Introduction to Computer Science

Type: Compulsory for the students of the departments of PSY and SPS
Unrestricted Choice (for students of other departments)
Level: Undergraduate
Semester: Fall and Spring
Credit: 6 ECTS units
Instructor: ……………… (Fall) / …………….. (Spring)

Objectives: Introduction to the basic concepts and the wide range of Computer Science. Familiarization and global update of students with the structure and use of computers, computer programs, the Internet and the application of Computer Science to other fields.

Content: The course aims to provide students with basic understanding of computer science concepts. The objective of the course is to introduce the students to the ‘modern’ research trends of the computer science field and the various applications of computer science in other
areas. Furthermore, to allow students to appreciate the potentials of informatics and especially the web in their working environment. Students will also become aware of internet safety and malicious software and how they can protect themselves and their data at personal and professional level. Through the practical laboratory sessions, students will get familiar with various tools and software that is considered vital for their academic and professional career. Specifically, the course will cover the following topics: Internet safety and malicious software, social networking, introduction to Web 2.0, search engines, social networking, bibliography and citation management tools.

**Prerequisites:** ---------

**Bibliography:** ---------

**Teaching methods:** Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework (laboratory assignments).

**CS002 Introduction to Computer Science**

**Type:** Compulsory for the students of the departments of EDU

**Level:** Undergraduate

**Semester:** Fall and Spring

**Credit:** 5 ECTS units

**Instructor:** …………

**Objectives:** Introduction to the basic concepts and the wide range of Computer Science. Familiarization and global update of students with the structure and use of computers, computer programs, the Internet and the application of Computer Science to other fields.

**Content:** Fundamentals of Computer Science, the main historical events which have contributed in its development, and the possibilities it offers. Basic constituent elements of Computer Science and methods for making it valuable to other sciences and applications. Practical experience with application packages, and the UNIX environment. Basic principles of programming in a fourth generation language.

**Prerequisites:** ---------

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework (laboratory assignments).

**CS003 Computer Science and Information Systems**

**Type:** Compulsory for the students of the departments of ECO and PBA

**Level:** Undergraduate

**Semester:** Fall and Spring

**Credit:** 6 ECTS units

**Instructor:** ………… (Fall) / ……………… (Spring)

**Objectives:** Familiarization with the most basic concepts in Computer Science, Information Systems and Computer Systems. Touch with the current trends in the practice of Computer Science. Practical experience in the use of various software packages that are useful in the academic and professional worlds.

**Content:** The course aims to provide students with basic understanding of computer science concepts. The objective of the course is to introduce the students to the ‘modern’ research trends of the computer science field and the various applications of computer science in other areas. Furthermore, to allow students to appreciate the potentials of informatics and especially the web in their working environment. Students will also become aware of internet safety and malicious software and how they can protect themselves and their data at personal and professional level. Through the practical laboratory sessions, students will get familiar with various tools and software that is considered vital for their academic and professional career. Specifically, the course will cover the following topics: Internet safety and malicious software, social networking, introduction to cloud computing, introduction to databases, introduction to web design, advanced excel (excel statistics and economical formulas), data visualisation, social networking for commercial and marketing purposes.

**Prerequisites:** ---------
Bibliography: 

Teaching methods: Lectures (3 hours weekly) and Recitation/Laboratory sessions (1.5 hours weekly).
Assessment: Final exam, midterm exam and homework.

**CS011 Introduction to Information Society**

*Type:* Unrestricted Choice (for students of other departments)
*Level:* Undergraduate
*Semester:* ..........................  
*Credit:* 6 ECTS units
*Instructor:* ..........................  
*Objectives:* Familiarization with the most prominent concepts and applications of Information Society.
*Content:* Presentation of the formed framework for Information Society (IST). Basic concepts and constituent elements of IST, and the wider context for its application. Issues such as electronic government, telematics, digital business, electronic commerce, telemedicine, etc. Effects of IST on society and economy.
*Prerequisites:* ..........................  

**Bibliography:**

Teaching methods: Lectures (3 hours weekly).
Assessment: Final exam and homework (individual midterm project and final group project).

**CS012 Web Design Technologies**

*Type:* Unrestricted Choice (for students of other departments)
*Level:* Undergraduate
*Semester:* Spring
*Credit:* 6 ECTS units
*Instructor:* ..........................  
*Objectives:* (a) basic concepts of the Internet and the WWW, (b) well-known technologies for designing and developing websites and (c) the use of specialized web development software.
*Content:* Introduction to the Internet and the WWW. Web design and development technologies. Web servers and HTTP, HTML, XHTML, CSS, Javascript. User interface design guidelines. Usability evaluation.
*Prerequisites:* ..........................  

**Bibliography:**

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).
Assessment: Final exam, midterm exam and homework.

**CS013 History and Philosophy of Computation**

*Type:* Unrestricted Choice (for students of other departments)
*Level:* Undergraduate
*Semester:* ..........................  
*Credit:* 6 ECTS units
*Instructor:* A. Kakas
*Objectives:* Basic understanding of the foundational motion of computation, Computational machine and intelligence through their historical evolution. Theoretical and practical understanding of the automation of computation. Understanding of the relationship between computing and human intelligence.
*Content:* Foundational motions of computation, complexity, computational machine, algorithm, programming language, knowledge and intelligence. Basic computational models and their corresponding problems. Historical development of computers and their theoretical basis. The scientific and engineering character of computer science. The relation of computer science to other disciplines such as mathematics, physics, psychology and biology.

**Prerequisites:**

**Bibliography:**

2. Selected articles from the Journal of Minds and Machines.

**Teaching methods:** Lectures (3 hours weekly) and Recitation (1 hour weekly).

**Assessment:** Final exam and homework.

**CS014 Aristotle, Logic and Ethical Computer Science**

*Type:* Unrestricted Choice (for students of other departments)

*Level:* Undergraduate

*Semester:* Spring

*Credit:* 6 ECTS units

*Instructor:* A. Kakas

**Objectives:** Understanding the evolution of Logic from ancient times through a modern understanding of the needs of Information Technology and especially Artificial Intelligence. Understand the relationship between Aristotle's Logic with ethical values and the ethics of Artificial Intelligence machines.

**Prerequisites:**

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly).

**Assessment:** Final exam (50%) and assignments (50%).

**CS031 Introduction to Programming**

*Type:* Compulsory for students of MAS Department

*Level:* Undergraduate

*Semester:* Spring

*Credit:* 7 ECTS units

*Instructor:**********

**Objectives:** Introduction of the basic principles of programming with emphasis on structured programming, abstraction, and the design, implementation, checking and debugging of modular programs. Application of these principles using the FORTRAN 90/95 programming language.

**Prerequisites:**

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly), Laboratory sessions (1.5 hours weekly) and Recitation (1 hour weekly).

**Assessment:** Final exam, midterm exam, homework (theoretical and programming assignments) and quizzes.

---

**CS032 Introduction to Computer Science & Information Systems**

**Type:** Compulsory (for the students of the departments of ECO and PBA)

**Level:** Undergraduate

**Semester:** Spring

**Credit:** 6 ECTS units

**Instructor:** …………..

**Objectives:** Programming is examined as a problem-solving method. In particular the course presents the fundamentals of algorithmic thought and the implementation thereof through a programming language. Also, a high level programming language is introduced. Upon completion of the course students are expected to be able to cast problem solutions into an algorithmic form, and will have obtained a basic exposure to a widely used programming language such as C or Python.

**Content:** Introduction to the principles of programming with emphasis on structured programming, abstraction, and the design, implementation, checking and debugging of modular programs. Mastering the material through laboratory exercises in the C programming language.

**Prerequisites:** …………..

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Recitation/Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework.

---

**CS033 Introduction to Programming for Engineers**

**Type:** Compulsory for students of the Department of CEE

**Level:** Undergraduate

**Semester:** Fall

**Credit:** 5 ECTS units

**Instructor:** …………..

**Objectives:** Introduction of methods for problem-solving through programming. Provision of deep understanding of basic programming principles and algorithmic techniques, design, implementation, testing and debugging of modular programs. Application of the basic principles using the C programming language.

**Content:** Basic principles of programming with emphasis on structured programming, abstraction, and the design, implementation, checking and debugging of modular programs. Mastering the material through laboratory exercises in a traditional programming language such as C.

**Prerequisites:** …………..

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exams and homework (including programming assignments).

---

**CS034 Introduction to Programming for Electrical and Computer Engineers**

**Type:** Compulsory for students of the Department of ECE

**Level:** Undergraduate
Semester: Spring  
Credit: 7 ECTS units  
Instructor: ................

Objectives: Introduction of methods for problem-solving through programming. Development of procedural problem solving skills and algorithmic thinking. Provision of deep understanding of basic programming principles and algorithmic techniques, design, implementation, testing and debugging of modular programs. Understanding the important concepts such as program abstraction and data abstraction. Mastering of a high-level programming language (C).

Content: Introduction to computers and programming languages. Problem solving and programming, problem specification, algorithms and programs, modular programming, program and data abstraction. Software development process, top-down design, problem decomposition, reuse, trial and debugging. Variables: names, values, addresses, basic types (numbers, characters, logical values), operators and expressions, constants, library usage. Input/Output operations. Procedures (functions), parameters, calls, value or address referral. Program flow, variables’ scope, lifecycle of variables/function calls, program’s state. Procedural programming, algorithmic structures (sequence, selection, loop, recursion), memory. Synthesized and enumerated data types, arrays (vectors and multidimensional), structures, pointers (variables of pointer type, address and indirect referral operators, arrays and pointers and functions). Introduction to dynamic memory allocation.

Prerequisites:-------

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exams and homework (programming assignments) and quizzes.

CS035 Data Structures and Algorithms for Electrical and Computer Engineers

Type: Compulsory for students of the Department of ECE  
Level: Undergraduate  
Semester: Fall  
Credit: 7 ECTS units  
Instructor: ................

Objectives: This course studies methods of efficient organization and manipulation of data, complexity analysis of algorithm design techniques. The main objectives of the course are to familiarize students with data structures and their associated algorithms, techniques for evaluating the complexity of algorithms, and the development of skills for efficient algorithm design and implementation.

Prerequisites: CS034

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam and homework (theoretical and programming assignments)

**CS041 e-Health and Medical Informatics**

*Type:* Compulsory for students of the Medical School  
*Level:* Undergraduate  
*Semester:* Fall  
*Credit:* 6 ECTS units  
*Instructor:* ------------

**Objectives:** Introducing the doctor of the future to the new world order of electronic health (e-health) and medical informatics at local, European and international level. Consolidating the legislative and social framework of e-health. Explaining and appreciating the patient-centric approach to medical practice as a prerequisite for successful implementation of e-health. Exploitation of the potential offered by information and communication technologies in medicine and clinical practice, particularly through the modeling of medical practice, procedures and knowledge. Appreciating the importance of the available medical data for making e-health a reality.

**Content:** Introduction to the e-health environment and the appropriate operating framework. Legislative regulatory and social background needed for its materialization. The importance of information technology in extracting useful information from vast medical databases. Applications of computer systems used for the movement of medical knowledge, medical information management, proper use of a citizen's electronic folder for patients and support a medical decision. Reference to the legal framework that regulates the medical practice, in accordance with European and international directives.

**Prerequisite:** ------------

**Bibliography:** no book that covers all material expected to be taught in the course exists. Extensive use of the Internet will be recommended, even in the classroom. The following books are recommended.

Teaching methods: Lectures/presentations (3 hours weekly) and Recitation (1 hour weekly), discussions/presentations. Structured visits to hospital clinics for data collection and exploitation as to how these can be used by the medical staff.

Assessment: Written exams (midterm and final), essays (studies and/or exercises).

**CS042 eHealth Seminars**

*Type:* Compulsory for students of the Medical School  
*Level:* Undergraduate  
*Semester:* Spring  
*Credit:* 2 ECTS units  
*Instructor:* ------------

**Objectives:** Familiarization with the information and communication technologies (ICT) and their practical application in medicine and the medical environment. Acquiring of knowledge through eHealth practices adopted in real life by the distinguished presenters of the seminars. Study through videos practices in real environments such as, the intensive care unit, laparoscopic operations, robotic assisted operations, telediagnosis, teleconsultation; appreciation of the importance of medical databases. Understanding of what is coming up in future medicine, considering that ICT will continue to grow and offer its services to the medical profession.

**Content:** Selected presentations/demonstrations by at least six medical experts selected from Cyprus or abroad according to their availability. Teleconferencing may be used for real life
presentations and communication with the selected presenters.

Prerequisite: CS041

Bibliography: no book that covers all material expected to be taught in the course. Relevant bibliography will be provided by the presenters of the seminars and the Instructor of the course.

Teaching methods: Lectures/presentations (2 hours biweekly). Structured visits to hospital clinics in coordination with the presenters and the Medical School.

Assessment: Written e-exam, assignments (one individual and one group assignment).
Post Graduate Program of Studies

The postgraduate programme of studies leads to Master and Ph.D. Degrees in Computer Science.

The postgraduate studies in the Department are governed by Corresponding Rules of Post Graduate Studies, approved by the Senate (149th meeting 22/5/2002). These rules are included in the Appendix B of this guide. Also in Appendices C and D present the specifications to be met by the final form of the Master and Ph.D. dissertations, respectively.

Masters Programs

The Department of Computer Science, since the academic year 2009-2010, offers the following four Master Programmes:

1. Master in Computer Science (MCS)
2. Professional Master in Advanced Information Technologies (PM).

Since 2017/2018 the Department offers in collaboration with the Open University of Cyprus and the Department of Psychology of the University of Cyprus the following Master Programme:

3. Master Program: Master in Cognitive Systems

Since 2021/2022 the Department offers in collaboration with the Department of Business and Public Administration and the Department of Mathematics and Statistics the following Master Programme:

4. Master in Data Science

In accordance with the ECTS System, successful completion of at least 90 ECTS is required for obtaining a Master Degree at the postgraduate level.

To be admitted to a Master programme, a candidate must have a first degree in Computer Science or a related subject from an accredited university with an overall grade of “Very Good”. Any relevant industrial experience may be considered as an additional advantage.

In the Master Programs that include a Master Thesis, the thesis should be submitted upon completion to the digital library of the University of Cyprus, Lekythos (https://lekythos.library.ucy.ac.cy/?locale-attribute=en). A brief description of these four masters:

1. MASTER in COMPUTER SCIENCE

The Master Programme in Computer Science is designed primarily for Computer Science and other science-related graduates who seek to develop research skills and enhance their knowledge in advanced areas of Computer Science. Students who attend this programme may pursue a PhD degree after their graduation.

The completion of the programme requires 90 ECTS, and the duration of studies should be at least three semesters. These 90 credits correspond to eight courses and a Master thesis. More specifically:

- Seven postgraduate courses of 8 ECTS each (any seven from the postgraduate course list with the supervision of the Academic Advisor)
One postgraduate course of 4 ECTS (CS670 Research Methodologies and Professional Practices in Computer Science)

Master Thesis worth of 30 ECTS.

The seven graduate courses must be from the graduate course catalogue of the Department. Each student selects these courses with the guidance of the academic advisor.

In case a student successfully complete at least four courses from the specialized Master Direction of the Department then the student may transferred to the corresponding Specialized Master where will receive his diploma.

2. **MASTER in ADVANCED INFORMATION TECHNOLOGIES (PROFESSIONAL)**

The aim of the Professional Master in Advanced Information Technologies is to help Information Technology professionals to extend and update their knowledge in Advanced Computer Technologies and to acquire up-to-date know-how in subjects related to the national Information Technology industry like Software Engineering, the Internet, and Intelligent Systems.

The completion of the course requires 90 ECTS and the duration of studies must be at least four semesters. In particular:

- Nine postgraduate courses of 8 ECTS, out of which 4 should be related to the programme’s scope (identified as such in the Table of Specialization Courses and in the course descriptions)
- One postgraduate course of 4 ECTS (EPL 670 Research Methodologies and Professional Practices in Computer Science)
- Master Thesis worth of 15 ECTS, which can be replaced with two extra postgraduate courses.

The needs of employees and professionals in the Information Technology industry will be considered during the scheduling of courses (afternoon and evening courses and three-hour meetings).

3. **MASTER in COGNITIVE SYSTEMS**

This is a distance-learning program taught exclusively on-line in collaboration with the Open University of Cyprus and the Department of Psychology of the University of Cyprus. The program is taught in English.

Cognitive systems form a new generation of systems that aim to collaborate with their users at a level cognitively compatible with a non-computing expert in order to provide personalized and adaptive services, with each party, system and human, learning and adapting to the capabilities of the other. The need for developing such cognitive systems has been widely recognized. The Watson machine opened up the area of Cognitive Computing and we see today the development of the first Cognitive Assistants such as Siri, Cortana, Alexa, Google Assistant and others from every major computing company in the world.

Students are required to take:
- 3 first courses under the Foundations theme (COS511, COS512, COS513), where at least the two introductory courses (COS511, COS512) are expected to be taken during the first semester.
- electives among all other courses, as long as at least one third of the courses comes from Cognitive Psychology (CP), and one third of the courses come from Computer Science (CS).
4. MASTEr in DATA SCIENCE (MDS)

The programme is offered jointly by the Department of Business and Public Administration, the Department of Computer Science, and the Department of Mathematics and Statistics. It is expected to start in September 2021 and will be offered in English. Data science is an interdisciplinary field that uses scientific methods, processes, algorithms and systems to extract knowledge and insights from Big Data. Data Science is quickly becoming a field of central importance to the strategy of modern organizations. There is an increasing need for highly trained employees who can think across disciplines to transform data into actionable insights. The objective of the program is to provide students with a strong understanding of basic and advanced methods in statistical inference, machine learning, data visualization, and data mining, which are the essential skills a modern data scientist needs to possess.

The completion of the programme requires 90 ECTS and the duration is 1.5-year. The programme offers 3 tracks (Computer Science Track / Statistics Track / Business Analytics Track). The first two semesters will be dedicated to core courses, while students will select a track at the end of the second semester.

Full information about the program can be found at: https://datascience.cy/.

1 No specialization courses exist. All courses are eligible.
Short Course Description

For the current academic year 2019-2020, each course description includes the name of the instructor, however, for the restricted courses that are not offered for the current academic year, 2019-2020, the name of the instructor who suggested the course is included. The language of instruction for all courses is Greek.

CS601 Distributed Systems
Type: Restricted Choice for MCS, PM
Level: Graduate
Semester: Fall
Credit: 8 ECTS units
Instructor: Chr. Georgiou
Objectives: Familiarization with fundamental concepts and principles of distributed systems in both breadth and depth. Development of capabilities of designing, analyzing and programming distributed systems.
Prerequisites: 
Bibliography:
Teaching methods: Lectures (3 hours weekly) and Recitation/Laboratory Lecture (1.5 hours weekly).
Assessment: Final exam, midterm exam and homework (programming assignments).

CS603 Advanced Software Engineering
Type: Specialisation Course for PM and Restricted Choice for MCS
Level: Graduate
Semester: Fall
Credit: 8 ECTS units
Instructor: 
Objectives: Familiarization with advanced topics in Software Engineering with emphasis on two main axes: (1) Principles of designing and implementing component-based systems on the basis of modern techniques of development such as component-based software, software architectures and middleware-platforms. (2) Special topics on the development of software, such as requirements engineering, real-time software systems, and software cost estimation.
Prerequisites: Undergraduate course equivalent to the CS343 (Software Engineering)
Bibliography:

**Teaching methods:** Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam and homework (group projects).

**CS604 Artificial Intelligence**

**Type:** Restricted Choice for MCS, PM  
**Level:** Graduate  
**Semester:** Fall  
**Credit:** 8 ECTS units  
**Instructor:** Y. Dimopoulos and Chr. Christodoulou  

**Objectives:** This course covers specialized topics in Artificial Intelligence, such as modeling and solving constraint satisfaction and knowledge representation problems, symbolic learning, learning with various forms of neural networks, including deep learning and reinforcement learning.

**Prerequisites:**  

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Recitation (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework.

**CS605 Advanced Computer Architecture**

**Type:** Specialisation Course for PM and Restricted Choice for MCS  
**Level:** Graduate  
**Semester:** Fall  
**Credit:** 8 ECTS units  
**Instructor:** Y. Sazeidis  

**Objectives:** Students will learn: (a) current methodology for performance evaluation and comparison of computer systems; (b) basic and advanced concepts in the organization of modern microprocessors; and (c) current trends in the computer architecture area. Also, with the use of different tools, presented in the course, students will perform research projects in certain computer architecture topics.

**Content:** Performance evaluation and comparison, as well as benchmarking programs; Basic microarchitecture concepts of modern processors; Pipelining, instruction-level parallelism, prediction, speculation, memory hierarchy, and static/dynamic instruction scheduling; Examples of modern processors; Current research projects in the area of computer architecture.

**Prerequisites:** Undergraduate course equivalent to the CS221 (Computer Organization and Assembly Programming) and undergraduate course equivalent to the CS222 (Operating Systems).

**Bibliography:**

2. Selected research articles from the international literature.
**Teaching methods**: Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).
**Assessment**: Final exam, midterm exam, homework (final project, intermediate assignments), class participation and brief presentation.

**CS606 Computer Networks and the Internet**

**Type**: Specialisation Course for PM and Restricted Choice for MCS  
**Level**: Graduate  
**Semester**: Fall  
**Credit**: 8 ECTS units  
**Instructor**: V. Vassiliou

**Objectives**: Understanding (at a graduate level) of the basic concepts and matters regarding Computer Networks and the Internet. Familiarization with modern views of Computer Networks and exposure to the related open research problems.

**Content**: Introduction to Internet and Networking Technologies. TCP/IP suite of protocols, Quality of Service (QoS), New Networking Architectures, Protocols and Standards (e.g. DiffServ, IPv6, MPLS). Network Performance Evaluation (e.g. queueing theory, and simulation tools), Traffic Modeling and Traffic Engineering, Congestion Control and Resource Allocation, Network Design and Optimization.

**Prerequisites**: Undergraduate course equivalent to the CS324 (Communications and Networks)

**Bibliography**:

**Teaching methods**: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment**: Final exam and homework (Individual or Group Project and laboratory exercises).

**CS607 Visual Computing**

**Type**: Specialisation Course for PM and Restricted Choice for MCS

**Level**: Graduate  
**Semester**: Fall  
**Credit**: 8 ECTS units  
**Instructor**: C. Pattichis / Y. Chrysanthou

**Objectives**:  

**Content**: Binary image processing, intensity transformations, the discrete Fourier transform, linear and nonlinear filtering, image compression, image analysis, basic principles of video processing. Basic principles of 3D graphics: polygonal representations, transformations, local and world coordinate system, scene graph, camera and field of view specification, orthographic and perspective projection, clipping in 2D & 3D, polygon rasterization, back face elimination, visible surface determination with the Z-buffer method and Binary Space Partitioning Trees, local illumination - flat, Phong & Gouraud shading, real-time graphics, applications.

**Prerequisites**: Programming in C, basic linear algebra

**Bibliography**:

**Teaching methods**: Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment**: Final exam 40%, Midterm Exam 20%, Exercises and Project 40%.
CS646 Advanced Topics in Databases  
**Type:** Specialisation Course for PM and Restricted Choice for MCS  
**Level:** Graduate  
**Semester:** Fall  
**Credit:** 8 ECTS units  
**Instructor:** D. Zeinalipour  

**Objectives:** The main objectives of this graduate-level course are to provide an in-depth understanding of advanced concepts and research directions in the field of databases. The course is organized in three parts: (i) Fundamentals of Database Systems Implementation; (ii) Distributed, Web and Cloud Databases; (iii) Spatio-temporal Data Management, Sensor Data Management, other selected and advanced topics from the recent scientific literature.  

**Content:** (i) Fundamentals of modern Database Management Systems (DBMSs): storage, indexing, query optimization, transaction processing, concurrency and recovery. (ii) Fundamentals of Distributed DBMSs, Web Databases and Cloud Databases (NoSQL / NewSQL): Semi-structured data management (XML/JSON, XPath and XQuery), Document data-stores (i.e., CouchDB, MongoDB, RavenDB), Key-Value data-stores (e.g., BerkeleyDB, MemCached), Introduction to Cloud Computing (GFS, NFS, Hadoop HDFS, Replication/Consistency Principles), "Big-data" analytics (MapReduce, Apache's Hadoop, PIG), Column-stores (e.g., Google's BigTable, Apache's HBase, Apache's Cassandra), Graph databases (e.g., Twitter's FlockDB) and Overview of NewSQL (Google's Spanner and Google's F1). (iii) Spatio-temporal data management (trajectories, privacy, analytics) and index structures (e.g., R-Trees, Grid Files) as well as other selected and advanced topics, including: Embedded Databases (sqlite), Sensor / Smartphone / Crowd data management, Energy-aware data management, Flash storage, Stream Data Management, etc.  

**Prerequisites:** Undergraduate course equivalent to the CS342 (Database Systems)  

**Bibliography:**  

**Teaching methods:** Lectures (3 hours weekly), and Laboratory sessions (1.5 hours weekly).  

**Assessment:** Midterm, final exam and homework (assignments and presentation).  

CS651 Data Management for Mobile Computing  
**Type:** Specialization Course for PM and Restricted Choice for MCS  
**Level:** Graduate  
**Semester:** Spring  
**Credit:** 8 ECTS units  
**Instructor:**  

**Objectives:** Introduction to fundamental concepts, applications and limitations of mobile computing. Familiarization with practical applications and research topics of current interest in the field of Mobile Computing.  

**Prerequisites:** Undergraduate course equivalent to the CS446 (Advanced Topics in Databases) and undergraduate course equivalent to the CS324 (Communications and Networks)  

**Bibliography:**

*Teaching methods:* Lectures (3 hours weekly) and Recitation (1 hour weekly).

*Assessment:* Final exam, midterm exam and homework.

**CS653 Computer Games Software Technology**

*Type:* Specialisation Course for PM and Restricted Choice for MCS  
*Level:* Graduate  
*Semester:* Spring  
*Credit:* 8 ECTS units  
*Instructor:* --------

*Objectives:* Study in depth of the technologies of Electronic Commerce. Introduction to the software technology of client/server systems of e-Commerce and to Business Models of e-Commerce.

*Content:* Game structure and design, computer animation, movement and deformation, interactive cameras, visual simulation of physically-based models, special effects using particle systems, collision detection, articulated characters, navigation and other behavioural models for autonomous characters.

*Prerequisites:* --------

*Bibliography:*  

*Teaching methods:* Lectures (3 hours weekly) and Laboratory (1.5 hours weekly).

*Assessment:* Final exam, midterm exam and homework.

**CS655 Advanced Parallel Processing II**

*Type:* Specialisation Course for PM and Restricted Choice for MCS  
*Level:* Graduate  
*Semester:* Spring  
*Credit:* 8 ECTS units  
*Instructor:* P. Trancoso

*Objectives:* Introduction to fundamental architectural concepts and methods for parallel program execution. Examine the challenges and difficulties for parallel computing.

*Content:* Support for parallel program execution, parallel architectures, different types of multiprocessor interconnection networks, compilation of parallel programs, and performance analysis of various parallel applications.

*Prerequisites:* Undergraduate course equivalent to the CS420 (Computer Architecture) or undergraduate course equivalent to the CS605 (Advanced Computer Architecture I) or the consent of the instructor.

*Bibliography:*  
3. Selected research articles from the international literature.

*Teaching methods:* Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

*Assessment:* Final exam, midterm exam and homework (group project and exercises).

**CS656 Computer Graphics: Modeling and Realism**

*Type:* Specialisation Course for PM and Restricted Choice for MCS
Level: Graduate  
Semester: Spring  
Credit: 8 ECTS units  
Instructor: Y. Chrysanthou

Objectives: This course goes beyond the basics of digital image synthesis, looking at issues such as photo-realistic rendering, modeling and animation. A big component for this are the creation of realistic and detailed models as well as the faithful simulation of light transport. We will see how these can be applied to virtual and augmented reality. Students will acquire both the theoretical foundations as well as practical skills since a significant part of the course is the student project.

Prerequisites: C Programming and basic Linear Algebra.

Bibliography:

Teaching methods: Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam, midterm exam and homework (group project and exercises).

CS657 Wireless Networks

Type: Restricted Choice for MCS, PM  
Level: Graduate  
Semester: Spring  
Credit: 8 ECTS units  
Instructor: A. Pitsillides

Objectives: Introduction to wireless networks (mobile/local/cellular/Ad-hoc/Sensor/IoTs) with an emphasis on the fundamental concepts and principles of the technologies which are important for the design, application, evaluation and development of these systems. The course will also cover new architectures and topologies, existing and proposed standards, as well as open research issues.

Content: Wireless environment, Interference and other problems in wireless communications, basic principles of wireless local and metropolitan area networks, and cellular wireless networks. New architectures and technologies of wireless networks and wireless communication (e.g., ad-hoc and sensor networks, VANETS). Resource management techniques, Next Generation wireless networks of 3rd, 4th and 5th generation (3G UMTS, LTE, 4G, 5G), design and planning of wireless networks, protocols for wireless and mobile networks. Internet/Web of Things (IoTs, WoTs), new trends in Wireless Communication, such as Programmable Wireless Environments and Intelligent Surfaces.

Prerequisites: Undergraduate course equivalent to the CS324 (Communications and Networks)

Bibliography:

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final exam and homework (including Individual or Group Project and laboratory exercises).

CS658 Digital Video Processing

Type: Restricted Choice for MCS, PM  
Level: Graduate  
Semester: --------
**CS659 Design on Embedded Systems**

**Type:** Specialisation Course for PM and Restricted Choice for MCS  
**Level:** Graduate  
**Semester:** Spring  
**Credit:** 8 ECTS units  
**Instructor:** C. Pattichis  
**Objectives:** A review of embedded system processors. Organization of embedded systems: CPUs, RAM, ROM, buses, peripherals, sensors, actuators, interfacing. Examples of widely used processors buses and peripherals. Interfacing with peripherals: sampling, interrupts, advantages and disadvantages. Process distribution between hardware and software. Tools for the development of embedded systems and real-time operating systems. Hands-on experience with the development and implementation of embedded systems.  
**Prerequisites:** Knowledge on the subjects of Digital Systems, Computer Organization and Assembly Programming  
**Bibliography:**  
**Teaching methods:** Lectures (3 hours weekly) and Recitation (1 hour weekly) Laboratory sessions (1.5 hours weekly).  
**Assessment:** Final exam, midterm exam and homework.

---

**CS660 Information Retrieval and Search Engines**

**Type:** Restricted Choice for MCS, PM  
**Level:** Graduate  
**Semester:** Spring  
**Credit:** 8 ECTS units  
**Instructor:** G. Pallis  
**Objectives:** The objective of this course is to examine the main computer science principles that lie behind Google and other search engines. To this end, the course will focus on basic and advanced techniques for text-based information systems: efficient text indexing; Boolean and vector space retrieval models; evaluation and interface issues; text classification and clustering. The course will also focus on Web search including crawling, link-based
algorithms, and Web metadata.

**Prerequisites:** Algorithms, Data Structures, Internet Technologies and Linear Algebra

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework.

---

**CS662 Machine Learning and Data Mining**

**Type:** Specialisation Course for PM and Restricted Choice for MCS

**Level:** Graduate

**Semester:** --------

**Credit:** 8 ECTS units

**Instructor:** C. Pattichis

**Objectives:** Introduction of the fundamental principles, algorithms and techniques that support the development and implementation of data mining systems leading in the extraction of knowledge.

**Prerequisites:** --------

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework (case studies, exercises, oral presentation of a case study).

---

**CS663 Computational Logic**

**Type:** Restricted Choice for MCS, PM

**Level:** Graduate

**Semester:** --------

**Credit:** 8 ECTS units

**Instructor:** A. Kakas

**Objectives:** Familiarization with fundamental concepts and applications of Computational Logic. Familiarization with current research trends in Computational Logic.

**Prerequisites:** Undergraduate course equivalent to the CS324 (Communications and Networks)

**Bibliography:**
1. Selected research articles from the international literature.

**Teaching methods:** Lectures (3 hours weekly) and Recitation (1 hour weekly).

**Assessment:** Final exam and homework.

---

**CS664 System Analysis and Verification**

**Type:** Restricted Choice for MCS, PM

**Level:** Graduate
Semester: --------
Credit: 8 ECTS units
Instructor: A. Philippou

Objectives: Familiarization with current technologies for modeling, analysis and verification of computer systems.

Prerequisites: --------

Bibliography:
4. Selected research articles from the international literature.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).
Assessment: Final exam, midterm exam and homework.

CS665 Constraint Solving Methods
Type: Restricted Choice for MCS, PM
Level: Graduate
Semester: --------
Credit: 8 ECTS units
Instructor: Y. Dimopoulos

Objectives: A significant number of problems in Computer Science over a wide spectrum ranging from Computer Vision and Artificial Intelligence to the Management of Computer Networks and Scheduling are special cases of Constraint Satisfaction problems. This course covers advanced techniques for solving such problems and describes how they can be used in tackling real-life applications.

Prerequisites: CS604 or CS433

Bibliography:
2. Selected research articles from the international literature.

Teaching methods: Lectures (3 hours weekly) and Recitation/Laboratory sessions (1 hour weekly).
Assessment: Final exam, midterm exam and programming exercises.

CS667 - Computational Neuroscience
Type: Restricted Choice for MCS, PM
Level: Graduate
Semester: Spring
Credit: 8 ECTS units
Instructor: Chr. Christodoulou

Objectives: Computational Neuroscience is an emerging and dynamically developing field aiming to elucidate the principles of information processing by the nervous system. This course aims to develop and apply computational methods for studying brain and behaviour as well as understanding the dynamics of the conscious mind.

Content: Introduction to Computational Neuroscience. Basic neurobiology: from the brain

**Prerequisites:** Linear Algebra, Differential Equations

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Recitation/Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and laboratory exercises/oral presentations of selected research papers.

**CS668 Mechanical Vision**

**Type:** Specialisation Course for PM and Restricted Choice for MCS

**Level:** Graduate

**Semester:** Spring

**Credit:** 8 ECTS units

**Instructor:** C. Pattichis / Y. Chrysanthou

**Objectives:** The objective of this course is to understand the basic issues in mechanical vision and the major approaches that address them. Through the duration of the course, vision is treated as a process of inference from noisy and uncertain data in order to answer the question of how computers can understand the visual world of humans.

**Content:** Basic concepts and methodologies relating to the subject of Computer Vision. Image information, image processing, feature extraction. Image segmentation, clustering, multiple-image processing, case studies.

**Prerequisites:**

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Laboratory sessions (1 hour weekly).

**Assessment:** Final exam, midterm exam and homework (programming exercises).

**CS670 Research Methodologies and Professional Practices in Computer Science**

**Type:** Restricted Choice for MCS, PM

**Level:** Graduate
**Semester:** Spring  
**Credit:** 4 ECTS units  
**Instructor:** ……………

**Objectives:** Introduction to the methods and tools of Computer Science Research and technological culture. Familiarization with reading, reviewing and presenting of relevant literature. Technical writing. Literature surveying.  
**Content:** Seminars/lectures in Computer Science and practice. Research or technical literature reviewing. Presentation of technical study.  
**Prerequisites:** Successful completion of two graduate-level courses.  
**Bibliography:**  
1. Selected research articles from the international literature.  
2. Course Presentation Slides (introductory and research).  

**Teaching methods:** Lectures, research seminars and atomic assignments (summary of research seminars) and group study of a research subject under the supervision of a faculty member.  
**Assessment:** Attendance and participation in lectures and a number of research seminars, written atomic studies, group study of a research subject and technical presentation of the group study. The course grade is Pass/Fail.

**CS673 Algorithmic Game Theory**  
**Type:** Restricted Choice for MCS, PM  
**Level:** Graduate  
**Semester:** …………  
**Credit:** 8 ECTS units  
**Instructor:** M. Mavronicolas  
**Objectives:** …………  
**Content:** Strategic games. Pure and mixed strategies, utilities, best responses, equilibrium concepts. Pure and mixed Nash equilibria, their refinements and generalisations. Classical existence theorems of equilibria and their algorithmic aspects. Algorithms and complexity of equilibrium searching. The complexity classes PLS and PPAD and their relation to equilibrium computation. Bimatrix games and algorithms to compute their approximate equilibria. The Price of Anarchy and its variants. Analysis of the Price of Anarchy for both general and specific games (e.g., selfish routing games, congestion games, security games). Applications to realistic cases (e.g., social networks, Internet formation).  
**Prerequisites:** Undergraduate course equivalent to the CS211 (Theory of Computation) and undergraduate course equivalent to the CS436 (Algorithms and Complexity)  
**Bibliography:**  
2. Selected research articles from the international literature  
**Teaching methods:** Lectures (3 hours weekly) and Recitation/Laboratory sessions (1 hour weekly).  
**Assessment:** Final exam, midterm exam and homework (theoretical assignments).

**CS674 Networks and System Security**  
**Type:** Specialization Course for PM and Restricted Choice for MCS  
**Level:** Graduate  
**Semester:** …………  
**Credit:** 8 ECTS units  
**Instructor:** A. Pitsillides, V. Vassiliou  
**Objectives:** …………  
**Content:** Introduction to security threats and attacks. Cryptographic and cryptanalysis techniques. Key exchange management (PKI). Network and Internet security protocols (IPSec, SSL/TLS). Identification and authentication standards (Kerberos, AAA). System security (Firewalls, IDS). Specific threats on end-systems (viruses, worms, trojan horses, stack overflow, rootkits). Identification of security vulnerabilities in software and operating systems. Checking of networks and applications for vulnerabilities, introduction to computer

**Prerequisites:** Introductory graduate course equivalent to CS606 (Computer Networks and the Internet)

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly) and Recitation/Laboratory sessions (1 hour weekly and 1.5 hours weekly, respectively).

**Assessment:** Final exam, midterm exam and homework (studies and/or laboratory assignments).

**CS675 Web Services and Service Oriented Computing**

**Type:** Specialisation Course for PM and Restricted Choice for MCS

**Level:** Graduate

**Semester:**

**Credit:** 8 ECTS units

**Instructor:**

**Objectives:**

Understanding of the principles and the design of Web services, the programming of Web services and the protocols used. Understanding of the new architecture of microservices. Familiarization with knowledge representation via ontologies. Understanding of representation mechanisms.

**Content:** Introductory concepts. Relationship and difference between services and other related formalisms (distributed systems, component-based systems, etc.). Fundamental architectures and protocols (REST, SOAP, WSDL, UDDI). Fundamental development platforms (J2EE, JAX-RS, etc.). The microservices architecture. Problems and challenges. Information modeling and representation (ontologies, RDF and OWL protocols, etc.). Queries with SPARQL. LinkedData representation. Cooperative Information Systems and service composition. Business process modeling with WS-BPEL

**Prerequisites:**

**Bibliography:**

**Teaching methods:** Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

**Assessment:** Final exam, midterm exam and homework (studies and/or laboratory assignments).

**CS678 Temporal Information Systems in Medicine**

**Type:** Restricted Choice for MCS, PM

**Level:** Postgraduate

**Semester:** Fall

**Credit:** 8 ECTS units

**Instructor:** E.Keravnou-Papaillou

**Objectives:** Often the question whether medicine is art or science is posed. The support of various medical tasks (diagnosis, prognosis, therapy planning and patient monitoring) through information systems, actively concerns a number of scientific communities (artificial intelligence, databases, biomedical engineering, medical informatics), where the temporal dimension constitutes an integral aspect. Recently the focus has changed, from applications based on knowledge, to applications based on data, and from systems that advise
to systems that inform. The key challenge is no longer the mechanization of knowledge but
the intelligent utilization of data. Medical problems and the deployment of medical data pose
particular challenges, especially when the temporal dimension is a central component. The
course aims to present from a critical perspective the various aspects of Temporal
Information Systems in Medicine (theoretical foundations, applications, open research
topics) where such systems can be defined as information systems that can store, manage
and query time-oriented clinical data and can support various reasoning tasks with respect
to such data

Content: The significance of time in medicine. Modeling and reasoning with time (models
time and temporal entities). Requirements, ontologies and temporal reasoning models.
General theories of time from the perspective of the medical domain. Temporal databases
and their extensions for clinical data. Temporal abstraction of medical data (types of
abstractions, time-oriented patient monitoring). Time and clinical diagnosis (diagnostic
concepts, example applications, abductive reasoning using time-objects, temporal
constraints). Automated support for clinical guidelines and protocols (time-oriented
modeling of clinical guidelines). Research challenges.

Prerequisites:  

Bibliography

1. C. Combi, E. Keravnou-Papailiou and Y. Shahar, Temporal Information Systems in
2. M. Fisher, D. Gabbay and L. Vila (eds), Handbook of Temporal Reasoning in
3. C. Bettini, S. Jajodia and S. X. Wang, Time Granularities in Databases - Data
4. I. Mani, J. Pustejovsky and R. Gaizauskas (eds.), The Language of Time: A Reader,
5. Articles from scientific journals, such as Artificial Intelligence in Medicine.

Teaching Methods: Lectures (3 hours weekly) and discussions/presentations in the form
of seminars (1 hour weekly).

Assessment: Written examinations (midterm and final) and assignments (written essays
and/or programming projects).

CS679 Electronic Health

Type: Specialisation Course for PM and Restricted Choice for MCS

Level: Graduate

Semester: Fall

Credit: 8 ECTS units

Instructor:  

Objectives: To introduce the student to the medical and clinical environment from the
perspective of medical informatics and exploit the possibilities of using information
technologies for modeling, prototyping, presenting and using the relevant data. To study and
develop practical skills in building relevant intelligent information systems.

Content: Information retrieval from medical databases, data, medical records, live signals,
and data mining using intelligent techniques. Study of application systems that are currently
in use for managing medical data and suggest ways for better handling and building, medical
knowledge bases, electronic health record, and decision support systems for the medical
profession.

Prerequisites:  

Bibliography:

1. J. H. van Bemmel and M. Musen (Edts), Handbook of Medical Informatics,
2. E.H. Shortliffe (Editor), L. M. Fagan, G. Wiederhold, L.E. Perreault, Medical
Informatics: Computer Applications in Health Care and Biomedicine, Springer
3. L. Burke, B. Weill, Information Technology for the health professionals, Pentic
Hall, 2000.

Teaching methods: Lectures (3 hours weekly) and Discussions/Presentations (1 hour
weekly).
Assessment: Final exam, midterm exam and homework (studies and/or laboratory assignments).

CS680 Cognitive programming
Type: Restricted Choice for MCS, PM
 Semester: Spring
 Credit: 8 ECTS units
 Instructor: A. Kakas

Objectives: Basic elements of cognitive science and the relation between logic and argumentation. Computation models for cognitive intelligence that follow representational models from cognitive psychology. The structure of knowledge and the human mechanism for common logic. The architecture of cognitive systems and their dynamic development cycle. Utilization of STAR, IBM Watson and other similar systems in the development of cognitive systems.

Prerequisites: 

Bibliography: 

Teaching methods: 

Assessment: 

CS681 Advanced Topics in Software Reuse
Type: Specialisation Course for PM and Restricted Choice for MCS
Level: Graduate
 Semester: Spring
 Credit: 8 ECTS units
 Instructor: G. Kapitsaki

Objectives: Understanding the usefulness of software reuse. Deepening in the different levels of reuse and understanding the differences between them. Use of software components in practice.

Prerequisites: 

Bibliography: 

4. Selected research papers and articles.

Teaching methods: Lectures (3 hours weekly), Recitation (1 hour weekly) and Laboratory sessions (1.5 hours weekly).

Assessment: Final and midterm exam, homework and semester project.

CS682 Advanced Security Topics
Type: Specialisation Course for PM and Restricted Choice for MCS
Level: Graduate
 Semester: Spring
 Credit: 8 ECTS units
 Instructor: E. Athanasopoulos

Objectives: Crash-course introduction to applied cryptography, systems and network security and thoroughly covering of several advanced topics in applied cryptography, software vulnerabilities and memory errors, side channels, attacks and defenses, mobile security, web security, network security, privacy, and anonymity.
Content: Short introduction to security basics and then special topics are presented. Special topics include advanced cryptographic attacks in protocols, software exploitation through code-reuse (return-oriented programming, jump-oriented programming, and call-oriented programming), heap exploitation, side channels, advanced software hardening, exploiting special network protocols (DNS, NTP, etc.), complex attacks in network applications, and privacy issues. The course is seminar-based in part. Once the basics are introduced by the instructor, students will study advanced papers in class and will have the opportunity to get a feel of what are the important topics in modern security research.

Prerequisites: --------

Bibliography:
5. Selected research papers and articles.

Teaching methods: Lectures (3 hours weekly) and Recitation (1 hour weekly).

Assessment: Final exam, midterm exam, student paper presentation and homework (including laboratory assignments).

CS683 - Technology Entrepreneurship
Type: Restricted Choice for MCS, PM
       Restricted Choice for Ph.D. candidates
       Elective (Free) for students of other Departments
Level: Graduate
Semester: Fall
Credit: 8 ECTS units
Instructor: M. D. Dikaiakos
Language: English

Objectives: This course explores key challenges faced when one aspires to translate scientific and technological ideas into globally marketable products or services and embark on innovation-driven enterprise entrepreneurship, with a focus on software and Internet-based businesses. Students will develop knowledge and skills to understand and be able to address a variety of issues faced by startup founders and chief technology officers who need to innovate at the boundaries of information technology and business by understanding both perspectives.

Contents: Study and experimentation with acknowledged methodologies for innovation-driven entrepreneurship and associated tools, pursuing the translation of the students’ ideas into entrepreneurial endeavors. In particular: the key stages of turning an idea or invention into a commercial product; the Lean Product Process and the Business Model Canvas methodologies in Information Technology and Scientific application contexts; the Disciplined Entrepreneurship methodology; techniques for the creative ideation and the design of software applications, products and services, such as Design Thinking, Innovators’ Compass, and Sprint; fundraising and financing options for startups; the basics of incorporation and company structure; attracting talent, establishing and managing a team; tools for project and team management, collaboration, ideation, rapid prototyping: Trello, Slack, SimpleMind, Proto.io, Github, Google AdService, Google Cloud, Heroku, etc.; preparation of pitch decks, and pitch presentations in front of potential investors.

Prerequisites: --------

Bibliography:
• Laura Klein, *UX for Lean Startups*, O'Reilly, 2013.

*Teaching methods*: Lectures (3 hours weekly) and Recitation (1 hour weekly).

*Assessment*: Homework, semester group project (report and oral presentation).

---

**CS699 Special Topics in Computer Science**

*Type*: Restricted Choice for Ph.D. candidates (and conditionally for MCS, PM)

*Level*: Ph.D. and Advanced M.Sc.

*Semester*: .........................

*Credit*: 8 ECTS units

*Instructor*: .........................

*Objective*: The objective of this course is to promote the research and technology culture in the graduate program of the Computer Science Department. The course focuses on a specific topic of Computer Science. Further information regarding the prerequisites, description, requirements, and assessment of the course will be presented when the course is announced on the Department’s website.

*Content*: The content of the course is according to the specific topic. Prerequisites: With consent of the Lecturer.

*Prerequisites*: The consent of the instructor.

*Bibliography*: -------

*Teaching methods*: Lectures (3 hours weekly) and Recitation/Laboratory sessions (1.5 hours weekly).

*Assessment*: Final exam, midterm exam and homework (laboratory exercises and additional exercises).
**Short Biographical Notes of Academic Staff**

**Elias Athanasopoulos**, Assistant. Before joining UCY he was an assistant professor with Vrije Universiteit Amsterdam. He holds a BSc in Physics from the University of Athens and a PhD in Computer Science from the University of Crete. He is a Microsoft Research PhD Scholar. He has interned with Microsoft Research in Cambridge and he has worked as a research assistant with FORTH in Greece from 2005 to 2011. He is also a Marie Curie fellow. Before joining the faculty of Vrije Universiteit Amsterdam, he was a postdoctoral research scientist with Columbia University and a collaborating researcher with FORTH. He has several publications in the top security conferences like IEEE Security and Privacy, ACM CCS, Usenix Security, and NDSS.

**Andreas Aristidou**, Assistant professor. He had been a Cambridge European Trust fellow, at the Signal Processing and Communications Laboratory, University of Cambridge, where he obtained his PhD in Information Engineering (2011). He has a BSc in Informatics and Telecommunications from the National and Kapodistrian University of Athens (2005) and he is an honor graduate of Kings College London (2006), where he obtained his MSc degree in Mobile and Personal Communications (2006). Previously, he served as Senior PostDoc Researcher at the Interdisciplinary Center Herzliya in Israel, the Shandong University in China, the University of Cyprus, and the Cyprus University of Technology. He has also taught as a Visiting Lecturer at the University of Nicosia. He is a senior member of the Institute of Electrical and Electronic Engineers (IEEE), the Association of Computing Machinery (ACM), Eurographis, and the Cyprus Scientific and Technical Chamber, where he served as a member of the Research Committee. Andreas is on the editorial board of The Visual Computer (TVC) journal, and he is guest editor of the Advances in Applied Clifford Algebras (AACA) journal. His main research interests are focused on 3D motion analysis and classification, motion portrayal and synthesis using deep learning techniques, human animation in games and simulations, including intangible cultural heritage, and involve motion capture, inverse kinematics, and applications of conformal geometric algebra in graphics.

**Chris Christodoulou**, Professor. Undergraduate studies at Queen Mary and Westfield College, University of London, UK (BEng in Electronic Engineering, 1991) and Birkbeck College, University of London, UK (BA in German, 2008). Graduate studies at the Kings College, University of London, UK (Ph.D. in Electronic Engineering, 1997). He has worked as a Postdoctoral Research Associate at the Kings College, University of London, UK (1995-97), and he has taught as a Lecturer (Assistant Professor) at Birkbeck College, University of London, UK (1997-2005). His current research interests include computational neuroscience, neural networks and machine learning.

**Yiorgos Chrysanthou**, Professor. Head of the Graphics and Hypermedia lab and Research Director of the Centre on Interactive Media, Smart Systems and emerging Technologies (RISE). Educated in the UK (BSc and PhD from Queen Mary and Westfield College) and worked for several years as a research fellow and a lecturer at University College London. He has published over 80 papers in journals and international conferences on computer graphics and virtual reality and is a co-author of the book "Computer Graphics and Virtual Environments: From Realism to Real-Time", (Addison-Wesley 2001+ China Machine Press 2004). Yiorgos serves as an associate editor for the Journals Computer Graphics Forum and Computers and Graphics, and review editor for Frontiers in Robotics and AI (Specialty Section Virtual Environments). He served as the local or overall coordinator of over 25 research projects, related to 3D graphics, virtual reality and applications and as Organising or Program Chair for several conferences. His research interests lie in the general area of 3D Computer Graphics, recently focusing more on the development of algorithms for real-time
AR and VR rendering, reconstruction of urban environments and computer animation.

Marios D. Dikaiakos, Professor. Undergraduate studies at the National Technical University of Athens (Dipl.-Ing. In Electrical Engineering, summa cum laude, 1988). Graduate studies at Princeton University (Ph.D. 1994, M.A. 1991 - both in Computer Science). He has worked and taught as Research Associate at the University of Washington, Seattle, USA (1994-1995), the University of Cyprus (visiting Assistant Professor 1996; Assistant Professor 1998-2004; Associate Professor 2004-2011; Professor from 2012), the University of Crete, Greece (Socrates/Erasmus visiting Professor, 10/2004), and Rutgers University, USA (visiting Research Professor, spring semester 2005). He also spent a pre-doctoral internship at the Paris Research Lab of Digital Equipment Corporation (1991). He established and is the Principal Investigator of the Laboratory for Internet Computing at the Department of Computer Science, University of Cyprus, where he directs several research projects funded by the European Union and the Research Promotion Foundation of Cyprus. Dr. Dikaiakos has served in the program committees of several international scientific conferences and has consulted with the European Commission and several organizations of European countries in evaluating research proposals, research projects, and academic work. His research interests include Network-Centric Computing with an emphasis on Grid Computing systems (Performance, Dependability, Information Services), Web Technologies (Search Engines, Web Characterization and Mining), and Mobile Computing (Application Protocols).

Yannis Dimopoulos, Professor. Undergraduate and graduate studies at the Athens University of Economics (B.Sc. in Computer Science 1987, Ph.D. in Computer Science, 1992). He has worked as Researcher at the Max-Planck-Institute for Computer Science, Germany (1992-1994), University of Cyprus (1995-1996) and University of Freiburg, Germany (1996-1998). His research interests are in the area of Artificial Intelligence with emphasis on Knowledge Representation and Reasoning, Planning, Logic Programming, Constraint Satisfaction and Machine Learning.

Chryssis Georgiou, Associate Professor. Undergraduate studies at the University of Cyprus, Cyprus (B.Sc. in Mathematics, 1998). Graduate studies at the University of Connecticut, USA (M.Sc., 2002; Ph.D., 2003, both in Computer Science and Engineering). Before joining the University of Cyprus in 2004, he worked as a Teaching and Research Assistant at the University of Connecticut, USA (1998-2003). His research interests span the Theory and Practice of Fault-tolerant Distributed and Parallel Computing with a focus on Algorithms and Complexity. He has published more than 90 articles in journals and conference proceedings in his area of study and he has coauthored two books on Robust Distributed Cooperative Computing. He served on several Program Committees of conferences in Distributed and Parallel Computing and on the Steering Committees of the International Symposium on Distributed Computing-DISC (2008-2010, 2010-2012) and the ACM Symposium on the Principles of Distributed Computing-PODC (2014-2015). In 2015 he served as the General Chair of PODC 2015, in 2017 he served as the Track Program Committee co-Chair (Stabilizing Systems: Theory and Practice Track) of SSS 2017, and in 2018 he served as the General co-Chair and PC co-Chair of the workshop ApPLIED 2018 (co-located with PODC 2018) and in 2019 as the General co-Chair of ApPLIED 2019 (co-located with DISC 2019). In 2020 he served as the PC co-Chair of NETYS 2020. As of January 2018, he is on the Editorial Board of Information Processing Letters (subject area: Distributed Computing). Dr. Georgiou’s research has been funded by the University of Cyprus, the Cyprus Research and Innovation Foundation, and the European Commission.

Antonis C. Kakas, Professor. Undergraduate studies at the Imperial College, University of London, UK (B.Sc. in Mathematics, 1980). Graduate studies at the Imperial College, University of London, UK (M.Sc. in Computer Science, 1987 and Ph.D. in Theoretical Physics, 1984). He has worked as Research Fellow at Kings College, UK (1984-1986), at the University of Zurich, Switzerland (1987-1988), and at Imperial College, UK (1988-
1992). He is a member of the editorial board of the international journals *AI Communications*, *Journal of Applied Logic* and *Journal of Theory and Applications of Logic Programming*. His research interests include Knowledge Representation and Reasoning in Artificial Intelligence, with applications to Machine Learning, Planning, Diagnosis, Cognitive Agents Computational Bioscience.

**Georgia Kapitsaki**, Associate Professor. Undergraduate studies at the National Technical University of Athens (Dipl. Electrical and Computer Engineering, 2005). Graduate studies at the National Technical University of Athens (M.Sc., 2008, co-organised, and Ph.D., 2009, School of Electrical and Computer Engineering). She has worked as a Research Associate at the National Technical University of Athens (2005-2009), as a Laboratory Assistant at the Technical Institute of Piraeus (2007-2009), as well as a software and telecommunications engineer in Germany (2005, 2009-2010). She has also worked as a visiting researcher at the Otto von Guericke University of Magdeburg and TU Delft, and has been involved in the organisation of international conferences (e.g. ICSR 2016, WISE 2012, SAC 2019, FM 2016, IEEE Services 2014). She has published over 60 papers in international journals and conferences, and is contributing to open source projects. She has been involved and received funding from European research projects (e.g. CYberSafety, TAMIT, PaaSage, VALS). She is a member of the editorial board of ERCIM News and has been a guest editor for a special issue in Elsevier Journal of Systems and Software. Her research interests include Software Engineering, Open Source Software, Context-aware applications, Privacy Enhancing Technologies (PETs) and Web of Things.

**Elpida Keravnou-Papailiou**, Professor. Undergraduate studies at Brunel University, UK (B. Tech. in Computer Science, 1982). Graduate studies at Brunel University, UK (Ph.D. in Cybernetics, 1985). She has taught at University College London, UK (Lecturer, 1985-1991; Senior Lecturer, 1991-1992; Director of the M.Sc. Program in Computer Science). She served as first Rector of the Cyprus University of Technology (2012-2015), as Chair of the Governing Board of the Cyprus University of Technology (2009-2010), as Chair of the Cyprus Council for the Recognition of Degrees (2004-2008), as Vice Chair of the Evaluation Committee for Private Universities (2005-2015), as a Member of the Council for Educational Evaluation and Accreditation (2001-2006), as a Member of the Governing Board of the Cyprus National Scholarships Foundation (2003-2006), as a Member of a Committee of Specialists for Education Reforms in Cyprus (2003-2004), as a Member of the Preparatory Committee for the establishment of the Cyprus Open University, and as a Bologna Expert and contact point for academic recognition in Cyprus. At the University of Cyprus she served as Vice Rector for Academic Affairs (2002-2006), as Dean of the School of Pure and Applied Sciences (1999-2002), and as Chair of the Department of Computer Science (1994-1998) where she is currently serving again as Chair (2016-2018). During her term as Vice Rector for Academic Affairs she coordinated the implementation of the Bologna reforms at the University of Cyprus. She is Associate Editor of the journal *Artificial Intelligence in Medicine* (Elsevier) since the launching of the journal in 1989, and a Member of the Editorial Board of the journal *Systems Research and Information Science* (Gordon and Breach) and of the electronic open access journal *Advances in Artificial Intelligence* (Hindawi Publishing Corporation – www.hindawi.com/journals/aai). During the period 2003-2005 she served as Chair of the Artificial Intelligence in Medicine Europe (AIME) Board. Her research interests include Knowledge Engineering, Artificial Intelligence in Medicine, Expert Systems, Deep Knowledge Models, Diagnostic Reasoning, Temporal Information Systems in Medicine, Temporal Reasoning and Temporal Data Abstraction, Hybrid Decision Support Systems, Quality Assurance, and Flexible Learning Paths. In addition to her publications in scientific journals and conference proceedings she has co-authored seven scientific books published by Springer, Elsevier, Kluwer, Kogan-Page, Chapman and Hall, Abacus Press, and the Greek Open University. She has served as a Member of the Governing Board (June 2012 – June 2018) and of the Executive Committee (July 2014 – June 2018) of the European Institute of Innovation and Technology (EIT - www.eit.europa.eu).

**Marios Mavronicolas**, Professor. Undergraduate studies at the National Technical
University of Athens, Greece (Diploma in Electrical Engineering, 1985; Summa cum Laude). Graduate studies at Harvard University, USA (M.A., 1988; Ph.D., 1992, both in Computer Science). He has taught at University of Crete, Greece as Visiting Assistant Professor (1992-93), and at the University of Connecticut, USA as Assistant Professor (1999). He is on the Editorial Board of the journals *Theoretical Computer Science, Journal of Interconnection Networks* and *Networks*, and he is the Distributed Computing Column Editor of the *Bulletin of the European Association for Theoretical Computer Science*. He has been the Program Committee Chair for the 11th International Workshop on Distributed Algorithms (WDAG 1997), the Program Committee Co-Chair for the 2nd International Workshop on Internet and Network Economics (WINE 2006), and the Program Committee Chair for the 2nd International Symposium on Algorithmic Game Theory (SAGT 2009). He is the Chairman of the Cyprus Council for the Evaluation of Higher Degrees (ΚΥ.Σ.Α.Τ.Σ.) and the Vice-Chair of the Assembly of Rectors of Cypriot Universities. His research interests span the area of Algorithms and Complexity, with emphasis on Algorithmic Game Theory, Distributed and Parallel Computing, Networking and the Internet.

**George Pallis,** Associate Professor and Associate Director of Laboratory of Internet Computing. BSc (2001) and Ph.D. (2006) degree in Department of Informatics of Aristotle University of Thessaloniki (Greece). His research interests include Cloud computing with focus on Cloud elasticity and monitoring, Edge Computing and Big Data Analytics. Dr. Pallis has published over 70 papers in international journals (e.g., IEEE TKDE, IEEE TCC, IEEE TSC, ACM TOIT etc), magazines (e.g., CACM, IEEE Internet Computing) and conferences (e.g., INFOCOM, IPDPS, ICDCS, IEEE BIG DATA etc) and he is contributor of two international DIN (German Institute for Standardization) standards. His research has attracted more than 3.7M euro (funded by EC, Research Promotion Foundation in Cyprus, and industry (e.g., Google)). Dr. Pallis has served as PC Co-chair of CloudCom 2018 and CCGrid 2019. Dr. Pallis has also served in numerous Program and Organization Committees for international conferences and he received the best paper awards in the IEEE Big Data Conference (IEEE BIG DATA 2016) and the International Conference on Service-Oriented Computing (ICSOC 2014). He is Editor in Chief in the IEEE Internet Computing magazine, Associate Editor in the IEEE Transactions on Cloud Computing and Associate Editor in the Computing Journal.

**George A. Papadopoulos,** Professor. Undergraduate studies at Aston University, UK (B.Sc. in Computer Science and Mathematics, 1982). Graduate studies at Aston University, UK (M.Sc. in Computer Science, 1983) and at the University of East Anglia, UK (Ph.D. in Computer Science, 1989). He has worked as a Researcher at NCR Demokritos, Greece (1981-1982), as a Research Assistant at the Aristotelian University of Thessaloniki, Greece (1983-1985) and as a Research Associate at the University of East Anglia, UK (1987-1990). He is a recipient of an 1995 ERCIM Fellowship visiting GMD in Germany and CWI in the Netherlands. His research interests include Advanced Software Engineering, Parallel and Distributed Systems, Adaptive and Context Aware Systems, e-Health and e-Learning.

**Constantinos S. Pattichis,** Professor. Undergraduate studies at the Higher Technical Institute (H.N.D. in Electrical Engineering, 1979), and at the University of New Brunswick, Canada (B.Sc. in Electrical Engineering, 1983). Graduate studies at the University of Texas at Austin, USA (M.Sc. in Biomedical Engineering, 1984), at the University of Newcastle Upon Tyne, UK (M.Sc. in Neurology, 1988), and at the Queen Mary College, University of London, UK (Ph.D. in Electronic Engineering, 1992). He has worked as a Research Associate (1986-87) and as a Senior Research Scientist (1990-92) at the Cyprus Institute of Neurology and Genetics and has taught as Visiting Lecturer at the Higher Technical Institute of Cyprus (1990-1992). He is Associate Editor of the scientific journals *IEEE Transactions on Information Technology in Biomedicine* and the *IEEE Transactions on Neural Networks*. He served as Chairman of the IEEE Cyprus Section, the Cyprus Association of Medical Physics and Biomedical Engineering and of the conferences Medical and Biological
Engineering and Computing (1998) and IEEE MELECON 2000. His research interests include the development of Computational Intelligent Systems (based on Neural Networks and Genetic Algorithms), Data Mining in Medicine, Medical Imaging Analysis and Biosignal Analysis, and Health Telematics.

**Anna Philippou**, Professor. Undergraduate studies at the University of Oxford, UK (B.A. in Mathematics and Computation, 1992). Graduate studies at the University of Warwick, UK (M.Sc. in Parallel Computers and Computation, 1993; PhD in Computer Science, 1997). She has worked as a Teaching Assistant at the University of Warwick, UK (1993-1996) and as a Postdoctoral Research Fellow at the University of Pennsylvania, USA (1997-1998). Her research interests include Concurrency Theory and its Applications, Specification and Verification of Concurrent Systems, Formal Methods for Safety-Critical Systems and Algorithmic Game Theory. She has published in top journals and international conference proceedings in her research field. She has also served in the Program Committees of the top conferences on Formal Methods, co-chaired the Program Committee of the TACAS 2009 Conference, and served as the General Chair of the ETAPS 2010 and FM 2016 conferences. Her research activity has been funded by the Research Promotion Foundation and the European Commission.

**Andreas Piersis**, Assistant Professor. Undergraduate studies at the University of Cyprus (B.Sc. in Computer Science, 2006). Graduate studies at the University of Oxford (M.Sc. in Mathematics and Foundations of Computer Science, 2007; D.Phil. in Computer Science, 2011). He has worked at the University of Edinburgh (Associate Professor since 2020; Assistant Professor, 2016 - 2020), the Vienna University of Technology (Postdoctoral Researcher, 2014 - 2016), and the University of Oxford (Postdoctoral Researcher, 2011 - 2014). His research interests are database theory with emphasis on uncertain data, knowledge representation and reasoning, and logic in computer science. He has published numerous papers in leading international conferences and journals. He has also served on the program committees of several conferences, including the top-tier database theory and artificial intelligence conferences.

**Andreas Pitsillides**, Undergraduate studies at University of Manchester, Institute of Science and Technology (UMIST), UK (B.Sc. in Electrical and Electronic Engineering, 1980). Graduate studies at Swinburne University of Technology, Australia (Ph.D. in High Speed Multimedia Networks, 1993). Andreas heads the Networks Research Laboratory (NetRL, [http://www.NetRL.cs.ucy.ac.cy](http://www.NetRL.cs.ucy.ac.cy)), which he founded in 2002, and is appointed Visiting Professor at the University of the Witwatersrand (Wits), School of Electrical and Information Engineering, Johannesburg, South Africa. Andreas was the Department of Computer Science Chair from 2014-2016, a Founding member and Chairman of the Board of the Cyprus Academic and Research Network (CYNET) from 2000-2016, and appointed Visiting Professor at the University of Johannesburg, Department of Electrical and Electronic Engineering Science, South Africa (2014 -2017). His broad research interests include communication networks (fixed and mobile/wireless), Nanonetworks and Software Defined Metasurfaces and Metamaterials, Programmable Wireless Environments, the Internet- and Web- of Things, Smart Systems (e.g. Smart Grid) and Smart Spaces (e.g. Home, City), and Internet Technologies and their application in Mobile e-Services, especially e-health, and security. He has a particular interest in adapting tools from various fields of applied mathematics such as adaptive non-linear control theory, computational intelligence, game theory, and recently complex systems and nature inspired techniques, to solve problems in communication networks. Published over 300 referred papers in flagship journals (e.g. IEEE, Elsevier, IFAC, Springer), international conferences, and books and book chapters, participated in over 40 European Commission and locally funded research projects with over 7 million Euro as principal or co-principal investigator, received several awards, including best paper, presented keynotes, invited lectures at major research organisations, short courses at international conferences and short courses to industry. He served on the editorial boards
of the Journal of Computer Networks (COMNET), serves/served on many international conferences as general chair, technical program chair, and on executive committees, technical committees, guest co-editor, invited speaker, and as a regular reviewer for conference and journal submissions.

Yanos Sazeides, Assistant Professor. Undergraduate studies in Computer Engineering at Oakland University (B.Sc., 1991). Graduate studies at Cornell University (M. Eng. in Electrical Engineering, 1992) and at University of Wisconsin-Madison (Ph. D. in Electrical Engineering, 1999). He has worked at research/development laboratories for high performance processors at HP, Compaq and Intel. He has taught at the University of Cyprus as Visiting Lecturer (2000-2001). His research interests include Computer Architecture with special emphasis on High Performance Processors, Program Behavior, Execution Paradigms and Power Aware Microarchitectures.

Vasos Vassiliou, Associate Professor. Undergraduate studies at the Higher Technical Institute (H.N.D. in Electrical Engineering, 1993) and the University of South Florida (B.Sc. in Electrical Engineering, 1997). Graduate studies at the Georgia Institute of Technology, USA (M.Sc., 1999 and Ph.D., 2002, both in Electrical and Computer Engineering). He has worked as Research and Teaching Assistant at the Georgia Institute of Technology, USA. He has taught as a Visiting Lecturer at the Department of Computer Science, University of Cyprus (2004-2005) and as an Assistant Professor at the Intercollege, Cyprus (2002-2004). Is the chairman of the Board of Directors of the Cyprus Research and Academic network (CYNET) since 2016. Είναι Πρόεδρος του Διοικητικού Συμβουλίου του Κυπριακού Ερευνητικού και Ακαδημαϊκού Δικτύου (ΚΕΑΔ). He is a member of the Institute of Electrical and Electronic Engineers (IEEE) and of the Association of Computing Machinery (ACM). He is a of the IEEE Cyprus Section Executive Committee and Chair of the IEEE Communications Society Cyprus Chapter. His research interests include High Speed Network Architectures, Mobile Computing, Wireless Communications, Quality of Service (QoS) and Traffic Engineering for Computer and Telecommunication Networks.

Haris Volos, Assistant professor. Undergraduate studies at the National Technical University of Athens (Dipl.-Ing. in Electrical and Computer Engineering, 2005). Graduate studies at the University of Wisconsin-Madison (M.Sc., 2007 and Ph.D., 2012, both in Computer Sciences). He has worked as a researcher at Hewlett Packard Labs, Palo Alto (2013-2018) and as a software engineer at Google, Mountain View (2018-2019). His research interests span broad areas of computer systems, including computer architecture, operating systems, and data storage and processing.

Demetris Zeinalipour, Associate Professor. Undergraduate studies at the University of Cyprus, Cyprus (B.Sc. in Computer Science, 2000). Graduate studies at the University of California - Riverside, USA (M.Sc., 2003; Ph.D., 2005, both in Computer Science and Engineering). He has worked at the University of California - Riverside, CA, USA (Teaching and Research Assistant, 2000-2005), the University of Cyprus (Visiting Lecturer, 2005-2007), the Open University of Cyprus (Lecturer, 2007-2009) and the University of Cyprus (Lecturer, 2009-2012 and Assistant Professor, 2013-now). He has also a short-term visiting researcher at Akamai Technologies, Cambridge, MA, USA (2004), a Marie-Curie Fellow at the University of Athens, Greece (2007) and a visiting researcher at the University of Pittsburgh, PA, USA (2015). During 2016-2017, he was on a sabbatical at the Max Planck Institute for Informatics, Saarbrücken, Germany. He has founded and directs the Data Management Systems Laboratory (DMSL) at the Department of Computer Science at the University of Cyprus. He is a Senior Member of Association for Computing Machinery (ACM), New York, NY, USA, a Senior Member of Institute of Electrical and Electronics Engineers (IEEE), Piscataway, NJ, USA, a Member of the Advanced Computing Systems Association (USENIX), Berkeley, CA, USA and a Humboldt Fellow of the Alexander von Humboldt Foundation, Bonn, Germany. His research interests include Data Management in Computer Systems and Networks, particularly Mobile and Sensor Data Management; Big
Data Management in Parallel and Distributed Architectures; Spatio-Temporal Data Management; Network and Telco Data Management; Crowd, Web 2.0 and Indoor Data Management; Data Privacy Management.
Appendix A: Rules for Diploma Projects

1. GENERAL

A Diploma Project is prepared by a final-year student, usually during the seventh and eighth semesters of study in accordance with the Programme of Studies of the Department. The part of Diploma Project prepared in the first semester is called Diploma Project I and the part corresponding to the second semester Diploma Project II. These two parts are prepared and completed in EPL400 - Diploma Project I and EPL401 – Diploma Project II, respectively.

A Diploma Project corresponds to seventeen and a half (17.5) Credit Units ECTS, which are credited to the student upon successful completion.

The student registers for the Diploma Project with the approval of the Academic Advisor.

The Department Council appoints a member of the Faculty of the Department, who ensures and coordinates the entire process of developing and assessing the Diploma Projects. This Faculty member is known as the Diploma Projects Coordinator.

All the forms and guides mentioned in this section are digitally available on the website of the Department. The Department maintains a Digital Library for the Diploma Projects for archiving purposes.

2. SUBSTANCE, FORM AND EVALUATION CRITERIA

2.1 Substance

Each Diploma Project must contain sufficient information that reflects the student’s initiative, independent study and productivity (originality, in the broad sense).

The Diploma Project may be of theoretical or practical nature or a combination of both. A Diploma Project may include, for example, an application of existing techniques, extension of known methods in the theory, software, hardware or applications areas, development of a prototype system, address theoretical problems, a survey review or study of a theoretical or practical area, etc.

2.2. Form

A Diploma Project must be a comprehensive document structured in chapters and must follow the rules of the technical guidance report called Standards for Preparation the Diploma Project.

The Diploma Project should include an introduction to the subject, an analysis of the importance of project, a description of the related work, a review the work in the area of the topic, a description of the methodology used, listing, classification and evaluation of the results of the work and finally conclusions and suggestions for possible extension of the work.

Diploma Projects where software was created and/or used should also include the code of the software in a specific Annex, a description and analysis of the software a separate section, and instructions for the use of the software. The code of such software may not be used as the Thesis document.

2.3 Evaluation Criteria

The main criteria for the evaluation of the Diploma Project are the following:

[a] Quality of work (e.g. accuracy and completeness of analysis, appropriateness of methodology, validity of theoretical results, software quality, implementation, consistency of material presented and association of ideas).
Degree of the objectives achieved of the Diploma Project.

Degree of understanding by students of the area of the Diploma Project topic.

Quality of the written language of Diploma Project (e.g. structure and organization, clarity, ease of reading and understanding).

Quality of Presentation of the Diploma Project. (e.g. oral speech, the adequacy and suitability of multimedia used (such as slides), proper utilization of the allowed time of presentation, and most importantly to point the contribution of Diploma Project through the presentation).

3. PROCEDURE

3.1 Preparation

3.1.1 Submission and Announcement of Topics

Each member of the Faculty submits to the Department, end of March of each year, a number of Diploma Project topics greater than the ratio of the number of students per Faculty member. Each Faculty member reserves the right not to supervise a number of Diploma Projects larger than the nearest integer above the ratio of students per Faculty member.

Each topic has a title. It is expected that a brief description of each topic is made available to the students by the proposing faculty. (It is also expected that the faculty members will update and renew appropriately the description of the projects on their personal websites).

The Diploma Projects Coordinator establishes a list of the submitted Diploma Project topics, and announces the Diploma Project list to the faculty members of the Department and to the final-year students approximately in middle of April.

3.1.2 Choice of Topic

The successful completion of at least 156 ECTS is a necessary prerequisite for the assignment of a Diploma Project.

Each student should choose a Diploma Project topic. To this end, the students shall discuss with the corresponding faculty members that have offered the topics, in meetings during a specified period of time. Throughout the process of submission of preferred topics, the students obtain the agreement of the faculty member for the supervision of the corresponding project. This Faculty member will be the Diploma Project Supervisor for that student.

With the selected choice of the topics, the student completes a special Registration Form, available electronically on the website of the Department which includes the title, description, and any specialized software / hardware or other resources necessary for the preparation of the Diploma Project. The Registration Form is signed by the Faculty member, the Academic advisor of the student and it is deposited to the Department no later than the period of registration of students for the semester the student prepare the first part of the Diploma Project.

In case of not being able to select topic, the student returns the Registration Form to the Department, signed by him/her and the Academic Advisor. In this case, with the filing of the form, the Diploma Project Coordinator contacts the Faculty members of the Department, to ensure that every student who submitted the registration form without topic to select a topic before the end of the submission period. In case this is not possible, a special meeting of the Department Council is called to assure that each student is given a topic. The student must choose the topic selected by the Council meeting

Concurrently with the submission of the registration form, the student must register for the EPL 400 course.

3.1.3 Change of Subject

Changing topic of the Diploma Project (with the same or another supervisor) is possible within the first three (3) weeks of the semester the student enrolled for the first part of the Diploma Project (Diploma
Project I). To this end, using the same procedure that was followed for the submission of the original Diploma Project topic, the student fills in the Special Registration Form to the Department in order for the coordinator of Diploma Project to approve it.

3.2 Preparation

3.2.1 Supervision

The supervision of a student who prepares a Diploma Project is the responsibility of the Diploma Project Supervisor. The monitoring and controlling of the Diploma Project progress is done through regular meetings between the student and the supervisor. In some cases a co-supervisor may be indicated. The supervisor must be a PhD holder and may either come from the Department of Computer Science or from an institute or organization outside the Department.

3.2.2 Interim Evaluation

During the examination period of the first semester in which the student enrolled in the Diploma Project, the student submits to the Supervisor a brief Progress Report. Following the submission of the Progress Report, the Supervisor shall submit a written assessment of the progress of the student to the Department, which is also sent to the student. The possible grades for this assessment are Success or Failure. The grade of the Diploma Project I is the student’s grade for the course EPL400 which has been enrolled for the current semester.

In the second semester the student can enroll in the Diploma Project II, EPL401, only if the student has succeeded with EPL400 course. In case of a Failure grade results in the student enrolling again in the first part of the Diploma Project (Diploma Project I: EPL400) in the same or different topic (with the same or different supervisor).

3.3 Evaluation

The final evaluation of the Diploma Project takes place towards the end of the semester where the student is registered for Diploma Project II.

3.3.1 Second Assessor

The Diploma Project is assessed by the supervisor, and the co-supervisor (if assigned), together with another member of the Faculty, known as the Second Assessor. The Diploma Project Coordinator with the collaboration of the Supervisors, publishes a list of Assessors and Program of Diploma Project presentations.

In special cases, the Coordinator of the Diploma Project may approve as a Second Assessor a Visiting Faculty Member of the Department or a Member of the Special Teaching Staff of the Department or a Faculty member from other Department of the University or/and other University in Cyprus or abroad. The approval may be justified in cases of close affinity of the Second Assessor Diploma on the subject of the Diploma Project.

3.3.2 Presentations

The Diploma Project Coordinator publishes the Program of Diploma Project presentations for three days during the week immediately following the examination period. The Program of Diploma Project presentations must be made publicly available to all faculty members of the department and the presentations are open to the public.

Each student who is expected to complete its Diploma Project II based on the Academic Advisor judgment must be listed in the Diploma Project Presentation list. These students present their Diploma Project in public in front of their Academic Advisor and their Second Assessor.

The students who have been excluded from the Program of the Presentations of the diploma Project receive a grade equal to CD (Continuation of Diploma Project) and must continue working on the same Diploma Project so in the immediate following semester to complete their Diploma with success. Therefore, these students must reregister in the same course, EPL401.

3.3.3 Grading

After the presentation the Supervisor, in consultation with the Second Assessor, submits the grade for
the Diploma Project with written justification comments, in a specific Assessment Form, and in accordance with the procedure for filing course grades. The Assessment Form of the Diploma Project contains different evaluation criteria that need to be filled with numerical grades.

A Failure grade results in the student enrolling again in the first part of the Diploma Project (Diploma Project I) in a different topic with a different supervisor. A Success grade in Diploma Project receives a numerical grade according to the Rules Studies.

The grade of the Diploma Project is the grade for the courses EPL401 which is enrolled.

The Coordinator of the Diploma Project handles the cases where there is a disagreement on the grade for the Diploma Project between the Supervisor and the second assessor.

3.3.4 Submit in Digital Format

Within ten days after the presentation and evaluation of the Diploma Project, the student shall submit to the Department its Diploma project in digital form. Failure to submit timely may result in delay of the student’s graduation which may cause the graduation of the student impossible in the current semester.

3.3.5 Final Grade Submission

The coordinator of the Diploma Project submits the student’s grade for the Diploma Project to the Academic Affairs and Student Welfare in time.

These regulations approved on 106th meeting of the Council of Department of the Computer Science, on 6 December 2010
Appendix B: Rules for Graduate Studies

The Department of Computer Science offers Graduate Degree Programs that lead to Master in Advanced Information Technologies and PhD in Computer Science. The programs are published at the Department’s Guidebook. The Graduate Program Committee coordinates the programs based on the General Rules of the University of Cyprus.

[1] Admission Requirements

I. 1. The department announces once a year the maximum number of graduate students it can accept for the upcoming academic year starting in September. Applications arrived after the submission deadline is accepted only in case the number of graduate students is not met.

2. The applicants must submit an application, a CV, official transcripts from all colleges/universities attended, a personal statement about his/her goals and interests, and two letters of recommendations (possibly by faculty members of their college or university, mailed directly to the department). It is not necessary for the applicant to hold an undergraduate or college degree at the time he submits his application. However, the applicant must get/have a degree in Computer Science or related field of study before he joins the graduate program. The average grade (GPA) of the applicant should be 6.5/10 (or equivalent to that) and the degree should be from an accredited college/university (as it is defined by the General Rules of University of Cyprus).

3. Applications are examined by the Graduate Program Committee. The Graduate Program Committee holds the right, based on its judgment, to call the applicant for personal interview or ask for more information. The Graduate Program Committee writes an evaluation and admission report and submits it to the Department Council for approval. The Department Council holds the right to accept fewer students than it had announced. The department submits its report to the school it belongs to.

II. The department assigns an Academic Advisor to every new graduate student. To a PhD student the department assigns a Research Advisor. The Research Advisor is assigned by the Department Council, after suggestion of the Graduate Program Committee, and an agreement between the student and a faculty member. The Research Advisor watches over the research or any other work of the student and provides any necessary guidance.

III. For students whose undergraduate degree was not related to Computer Science there is a possibility to be asked to take some undergraduate courses offered by the department. The student must pass these undergraduate courses in order to continue the graduate program.

[2] Master Degree

I. To get a Master Degree in Computer Science, each student must complete successfully courses (a total of 60 ECTS units) from the Graduate Program and complete a Master Thesis of 30 ECTS units, under the supervision of a Research Advisor. The assignment of a Research Advisor is based on the rules of the University Senate and is done before the student submits the Thesis Proposal. The student can transfer up to 15 ECTS units from courses completed successfully from similar graduate programs. Theses completed at other graduate schools are not transferable.

II. The Thesis must deal with a research topic or a technical issue. It must be of some original contribution or show a thorough and clear understanding of some special topic. Full-time students normally complete the thesis in 6 months study time. When the student has completed successfully courses totaling to 30 ECTS units, he can submit a Form (signed also by his Research Advisor) stating his Master Thesis topic.

III. The Master Thesis is submitted at the department and defended within the time period decided by the Department Council.

1. When a Master Thesis is submitted the Chair of the Department appoints a Thesis Examination Committee of three members. The head of the committee is the student’s
Research Advisor. It is possible a member of this committee to be a faculty member of other department or to not be a faculty member but to hold a PhD Degree or have a reputation in the field of study. The Committee can have also external members who do not hold a faculty position. However, the membership must be approved by the Department Council and the external member must hold a PhD Degree or must have a reputation in the field of study.

2. The Master Thesis is defended in a presentation before the Thesis Examination Committee. The head of the Thesis Examination Committee is responsible for the procedures that must be followed during the defense.

3. The Thesis Examination Committee can accept (even with conditions) or reject a Master Thesis. The Thesis Examination Committee writes its decision in a Master Thesis Evaluation Form and submits it to the Department Council for approval. When the Thesis is accepted the department informs the Student Affairs Office for the graduation procedure of the student. When the thesis is rejected, the student can follow the suggestions of the committee and resubmit it for the first and the last time. The submission and thesis defense procedure is followed from the beginning.

IV. The minimum graduation time to get a Master Degree is three semesters and the maximum graduation time is eight semesters.

PhD Degree

1. The basic requirements to get a PhD Degree are:

   1. (a) Successful completion of at least 60 ECTS units of graduate level courses. A student with a Master or equivalent degree is partially or fully exempt from this requirement.

   (b) Successful completion of the Comprehensive Examination which must be taken no later than the fifth semester of his/her studies. The student submits to the department a request to take the Comprehensive Examination.

2. The Department assigns a Research Advisor to the student that has completed the ECTS units mentioned above.

3. The structure and the subjects of the Comprehensive Examination are decided by the Department. The Comprehensive Examination is general and attempts to measure the student ability to complete the degree. The topics that are examined are Theory, Software, Hardware, and Applications.

4. The Comprehensive Examination is presented before the Comprehensive Examination committee which is elected by the Postgraduate Committee of the department after it has been requested by the student’s academic research supervisor. The formation of the Comprehensive Examination committee must be approved by the Department committee. The academic research advisor of the student is the chair of the Comprehensive Examination committee.

5. The Comprehensive Examination consists of three phases. The student should obtain a passing grade in all of them to ensure success in the examination. The three phases are the following:

   i. Submit to the Comprehensive Examination Committee a written literature review on the student’s Research area. The review should have the length and the quality of a published survey article and must demonstrate the student’s adequate knowledge and understanding of the topic under investigation and the open problems. To prepare the review, the Research Supervisor may give the student an indicative bibliography. The review is graded by the members of the Comprehensive Examination Committee with a Pass / Fail. When a review receives a passing grade, the student may proceed to an oral examination.

   ii. The student should make an oral presentation of his/her survey to the committee. The presentation lasts 50-60 minutes, including questions addressed by the committee and the audience. The presentation is open to the public and should be announced to the members of the department and the University.

   iii. The oral examination of the student, which is made by the members of committee, is closed to the public. The purpose of the examination is to further investigate whether
the candidate has the skills and capability to conduct Doctoral-level research work in Computer Science.

6. The Comprehensive Examination Committee submits for approval to the department a list of students that have succeeded in the examination.

7. A student that fails to pass the first comprehensive examination must take the examination the next time it is offered. A second fail of the student in the Comprehensive Examination disqualifies the student from the PhD program of the department.

8. Second failure in the comprehensive examination implies exclusion from the PhD candidature in the Department.

II. 1. The Post Graduate Program Committee taking into consideration the suggestions of the Research Supervisor appoints a three member Research Committee for the PhD candidate. The chair of the Research Committee is the Research Supervisor of a student. At most, one member of the Research Committee may be a faculty member of another department.

2. The student is allowed to change his/her Research Supervisor. He/She must submit for approval by the Department Board a request explaining in detail the reasons he/she wishes to change supervisor.

III. 1. When the student has passed the Comprehensive Examination he/she submits a written Doctoral Thesis Proposal to his/her Research Committee. The proposal is also presented orally before the Committee members.

   a. The Doctoral Thesis Proposal must have the following structure:
      1. Introduction
      2. Motivation
      3. Problem Statement – Hypothesis
      4. Approach
      5. Roadmap
      6. Related Work
      7. Preliminary Work
      8. Work to be done
      9. Timeline
      10. Future work

   b. The Research Committee must examine the Doctoral Thesis Proposal before the end of the next semester. The proposal might be accepted or recommended for resubmission. The final acceptance of the proposal must be given before the start of the seventh year of the student study time. Otherwise, the student case (whether to continue or to terminate his PhD candidacy) is discussed at the Department Council.

IV. 1. Every Doctoral student must submit to the Research Supervisor an annual progress report. This report must be submitted before the end of each academic year.

   2. The annual progress report is graded by the Coordinator of the Graduate Studies and the Research advisor of the student with a Pass/Fail. The grade is submitted to Student Affairs and is marked in the student’s records to which level the student progress in his/her studies (research, writing).

V. 1. Every PhD candidate completes a Dissertation which must be an original and important contribution to the field of study.

   2. The written format of the Dissertation is described in the Department’s printed forms. The Dissertation can be submitted no sooner than four semesters before student’s admission and completing successfully his Comprehensive Examination.

VI. The student submits to the department six (6) copies of the Dissertation and a request (signed also by his Research Advisor) for the formation of a Dissertation Examination Committee. After this procedure, the graduate Program Committee, with suggestions from the Research Advisor, appoints an Examination Committee (based on the rules of University’s Senate). The Graduate Program Committee assures a copy of the dissertation is sent to the members of the Examination Committee. The dissertation is defended by the candidate before the Examination Committee. Note that the three faculty members of the Department are usually
the three members of the Research Committee.

VII. The Chair of the Examination Committee decides the date of the Dissertation Defense. The Defense must take place within three months from the Dissertation submission. All members of the Examination Committee must be present at the Defense. The defense procedure is based on the rules of the University’s Senate.

1. The approval of at least four members of the Examination Committee is required to award the degree. In this case, the Examination Committee has the right to request for changes or additions, which considers as necessary. The procedure for monitoring the changes or additions is decided by the Examination Committee and is written clearly in the Evaluation Report.

2. The Examination Committee hands over to the Department Chair a written Evaluation Report of the Dissertation and of the Doctoral Candidate in general, together with its recommendations, in a printed form. The Chair verifies that all the rules and procedures have been correctly followed and hands in the report to the Senate.

VI. A maximum of eight (8) academic years are allowed for the completion of the Doctoral Program.

Approved by the Senate, 149th Meeting, 22/5/2002
Appendix C: Specifications for Preparation of the Master Thesis

Abstract. An abstract is required. The body of the abstract may not exceed 400 words in length. Please see the sample abstract page for the format.

Minimum Margins. The minimum acceptable margins for all pages of the thesis and the abstract are 3.8 centimeters (1.5 inches) on left and 2.5 centimeters (1 inch) on the top, bottom, and right.

Paper Requirement. All pages of the thesis must be printed on 21 x 29.7 centimeter (8.27 x 11.69 inch) white paper. This is the regular A4 paper format.

Font and Point Size. Recommended fonts include Arial, Times New Roman, and Helvetica with a point size of either 11 or 12 (preferably 11).

Printing. Either laser printing or photocopying of high quality is acceptable. Inkjet printing is not acceptable as it is water soluble. Only one side of the paper is to be used for printing. Printing should be consistently clear and dark.

Spacing. The text of the thesis should be double spaced. Long quotations, footnotes, appendices, and references may be single spaced.

Color. It is recommended that you not rely on color to convey information (e.g., use symbols or labels rather than colors to differentiate the lines on a graph, or use stripes and cross-hatching instead of colors to distinguish areas on a map).

Photographs and Graphics. Photographs and graphics in the dissertation should be printed or photocopied directly on the paper as high quality black and white images. Scanned images must print clearly. If color must be used, only color laser or color photocopy printing is acceptable.

Use of materials copyrighted by others. IMPORTANT: Any material included that goes beyond “fair use” requires written permission of the copyright owner. It may be useful to include these in the thesis as an appendix.

Pagination. Preliminary pages (i.e., the approval page, acknowledgments, table of contents, and the like) are to be numbered consecutively using lower case Roman numerals. All pages of the text, appendices (if any), and references must be numbered consecutively using Arabic numerals. The page number of the first page of each Chapter must be centered on the bottom of the page. In all other pages, the page number must be placed on the top of the page, aligned to the right.

Landscape pages. The top of a landscape page should be at the left margin and the bottom at the right margin. The page number is to be in the same relative position as on the portrait pages. An easy way to apply page numbers to landscape pages is to run them through the printer twice – once for the text, table, or figure (landscape orientation) and once for the page number (portrait orientation).

Sequence of the main components of the dissertation. The appropriate order of the major sections of the thesis follows: the title page, the abstract, the copyright page (if needed), the approval page, acknowledgments, table of contents, the text, bibliography/references, and appendices (if any).
Bibliography/References. The ACM (http://www.acm.org/pubs) or the IEEE (http://standards.ieee.org/resources) reference style should be followed.

Footnotes and Endnotes No specific rules. The format that is prescribed by your advisory committee should be followed.

* * * *

It is recommended that you use your full legal name on the abstract, the title page, the copyright page (if appropriate), and on the approval page. Make certain that your name appears exactly the same way in all places.

Take a moment to check that all pages in all copies of your thesis are accounted for and in the proper order before submitting final copies to the Departmental Secretary. One hardcopy and an electronic version (in pdf format) of the thesis should be submitted to the Departmental Secretary.

* * * *

For students that plan to write their thesis using the Latex authoring language, they can download the style file “ucythesis.sty” that creates the required Master thesis format automatically from http://www.cs.ucy.ac.cy/~chryssis/master-specs.html.
Appendix D: Specifications for Preparation of the Doctoral Dissertation

Abstract. An abstract is required. The body of the abstract may not exceed 400 words in length. See the sample abstract page for the format.

Minimum Margins. The minimum acceptable margins for all pages of the dissertation and the abstract are 3.8 centimeters (1.5 inches) on left and 2.5 centimeters (1 inch) on the top, bottom, and right.

Paper Requirement. All pages of the dissertation must be printed on 21 x 29.7 centimeter (8.27 x 11.69 inch) white paper that it is at least 25% cotton and 20lbs. weight. This is a special A4 paper format that can be obtained at bookstores.

Font and Point Size. Recommended fonts include Arial, Times New Roman, and Helvetica with a point size of either 11 or 12 (preferably 11).

Printing. Either laser printing or photocopying of high quality is acceptable. Inkjet printing is not acceptable as it is water soluble. Only one side of the paper is to be used for printing. Printing should be consistently clear and dark.

Spacing. The text of the dissertation should be double spaced. Long quotations, footnotes, appendices, and references may be single spaced.

Color. It is recommended that you not rely on color to convey information (e.g., use symbols or labels rather than colors to differentiate the lines on a graph, or use stripes and cross-hatching instead of colors to distinguish areas on a map).

Photographs and Graphics. Photographs and graphics in the dissertation should be printed or photocopied directly on the paper as high quality black and white images. Scanned images must print clearly. If color must be used, only color laser or color photocopy printing is acceptable.

Use of materials copyrighted by others. IMPORTANT: Any material included that goes beyond “fair use” requires written permission of the copyright owner. It may be useful to include these in the dissertation as an appendix.
